FERRANTI

NEWS IN BRIEF

UKITO firms in majority

OVER half the UK computer industry, 18 firms, are now members of the United Kingdom Information Technology Organisation. It was announced this week as the controversial lobby group unveiled its official constitution. Donald Cook of ICL affirmed that pressure on government to win support for home-owned industry was getting more important than ever as the GATT code on preferential public purchasing loomed. UKITO has no formal links with the similar European Informatics Industry Association (CW, April 17), but is happy to have an open dialogue with it, Cook said. UKITO has been criticised as a divisive force in the UK industry, distinguishing as it does between home-owned and foreign-owned firms (CW, March 20).

Xerox UK bureau

XEROX Computer Services of Los Angeles is setting up a UK bureau. It will be based initially at the Rank Xerox factory at Welwyn Garden City, Herts while a permanent centre is being set up at Colindale, North London. Apart from time sharing facilities it will offer consultancy services.

GEC dispute ends

THE dispute at GEC Telecommunications in Coventry ended last week with ASTMS members accepting the company's offer of 17% and an agreement that changes in work patterns would only be introduced after proper consultation.

COMPUTER WEEKLY

Keen students win computer prizes

DRIVING a solar-powered fighting crumpled programmed never to bite British soldiers was one of the seven applications for computers which won eight-year-old John Boggis a Sinclair ZX80 last week, in a competition organised by the magazine Educational Computing.

His other ideas included a football trainer, a machine for reading to old people, and a computer that designed other computers, on

which the controls included buttons marked "explain" and "don't".

The 10 prizes, of which eight were computers, were awarded during the Computer Fair held by the Association of London Computer Clubs at the Polytechnic of North London. The main prize of a Research Machines RM380Z was won by Marcus Morris, a student at a teacher training college, for a complex biological simulation

involving three species.

The youngest individual winner was six-year-old Paul Galpin, whose entry showed his computer reminding his father his pocket money was due, while a group entry from Norton Globe Infants School in Cleveland showed how much the five-to-seven-year-olds there enjoyed the Commodore Pet they already had for doing sums or just pressing the keys.

Decision on Inmos soon

THE NEB's review of Inmos is expected to be completed within the next 10 days, when a cabinet committee will have to decide "whether this country needs to produce standard large-scale integrated circuits or can rely on the growing number of US companies setting up here."

Dick Petritz, Inmos managing director, remains confident that the company will get its second £25 million tranche, as it has done all it said it would and more. The NEB review party, just back from a successful visit to the Colorado Springs headquarters, have seen enough evidence to back up this point.

A positive decision, however, might have strings attached, and could involve further negotiations, adding to the seven-month delay in the company's plans. A negative decision would also be bad for Inmos: the company would continue operating in Colorado Springs, but at a slower rate, and eventually look to financial backing.

Racal acquisition

RACAL-MILGO Inc has acquired a small Chicago-based company, Telesystems Network Inc, which builds specialist data communication equipment for protocol conversion.

Tax problems for UK staff at ESA

THE status of UK operators and programmers working on the Continent on a temporary basis could be affected by a dispute over income tax involving 50 operators at the European Space Operations Centre at Darmstadt in West Germany that were hired from London personnel bureau Datasolve Knights.

The West German tax authorities are claiming that income tax has not been paid for several years by many of the UK operators at Darmstadt and the money which is said to be owing is being demanded from Knights

itself. However, Knights is insisting that the operators were responsible themselves for paying tax and the result has been a rift between Knights and ESOC which looks like ending in the operators being directly employed and paid by the European Space Agency which runs ESOC.

Knights is understood to be claiming that it never had a formal contract with ESOC because the Knights staff at Darmstadt were employed on a temporary basis. Knights' legal advisers have pointed to case

law in West Germany relating to the employment of temporary staff from an agency. Knights has no permanent office in West Germany.

Staff have been supplied to ESOC by Knights since the beginning of 1977 under a three-year contract worth £2.5 million. They have operated a variety of systems including the two ICL 2980s that process the digitised images beamed down to earth by the Meteosat satellite and generate the pictures now being a familiar part of weather bulletins on television.

Technical Change Centre could have beneficial effect on UK research

INNOVATION to boost the UK economy could be made easier and research could be directed in beneficial rather than harmful ways if the Technical Change Centre, just established by the Leverhulme Trust and two research councils, achieves its aims.

So said Sir Michael Swann, chairman of the centre (CW, February 21) announcing its official launch and the start of the hunt for someone to fill the £20,000 post of director.

The original name was the Centre for the Analysis of Technical Change, but this has been

modified because of the unfortunate connection of the acronym CATCH with "Catch-22". The Centre will have about 20 professional staff, funding of £500,000 a year, and it all goes well, another £250,000 a year of contract income. A location has not yet been chosen.

Explaining what the Centre could achieve that was not already being done by other bodies, Sir Geoffrey Allen, chairman of the Science Research Council said there needed to be a more even-handed approach to the forecasting and analysis of change. At present this tended to be carried out either by technical people looking at their own work from too close up or social scientists looking at it from too great a distance, with very little feed-through. The SRC hoped to get advice from the Centre on what research to pursue, he said.

Michael Posner of the Social Sciences Research Council said

Vydec word processors can be linked together

Vydec stand-alone word processors can now be linked together into a shared resource system with up to 16 terminals and 16 megabytes of central disc storage using the Network Facility announced in the US. This is one of the first steps in Vydec's development of the integrated Business Information System. It will eventually incorporate electronic mail, facsimile and intelligent communications. Networks which are not yet available in the UK consist of a central computer, a processor and a word processing terminal. One model can handle up to 16 terminals and another up to 16 terminals. Links can be established on a shared resource system. The system can be used on a variety of hardware including the IBM 3081, 3082, 3083, 3084, 3085, 3086, 3087, 3088, 3089, 3090, 3091, 3092, 3093, 3094, 3095, 3096, 3097, 3098, 3099, 3100, 3101, 3102, 3103, 3104, 3105, 3106, 3107, 3108, 3109, 3110, 3111, 3112, 3113, 3114, 3115, 3116, 3117, 3118, 3119, 3120, 3121, 3122, 3123, 3124, 3125, 3126, 3127, 3128, 3129, 3130, 3131, 3132, 3133, 3134, 3135, 3136, 3137, 3138, 3139, 3140, 3141, 3142, 3143, 3144, 3145, 3146, 3147, 3148, 3149, 3150, 3151, 3152, 3153, 3154, 3155, 3156, 3157, 3158, 3159, 3160, 3161, 3162, 3163, 3164, 3165, 3166, 3167, 3168, 3169, 3170, 3171, 3172, 3173, 3174, 3175, 3176, 3177, 3178, 3179, 3180, 3181, 3182, 3183, 3184, 3185, 3186, 3187, 3188, 3189, 3190, 3191, 3192, 3193, 3194, 3195, 3196, 3197, 3198, 3199, 3200, 3201, 3202, 3203, 3204, 3205, 3206, 3207, 3208, 3209, 3210, 3211, 3212, 3213, 3214, 3215, 3216, 3217, 3218, 3219, 3220, 3221, 3222, 3223, 3224, 3225, 3226, 3227, 3228, 3229, 3230, 3231, 3232, 3233, 3234, 3235, 3236, 3237, 3238, 3239, 3240, 3241, 3242, 3243, 3244, 3245, 3246, 3247, 3248, 3249, 3250, 3251, 3252, 3253, 3254, 3255, 3256, 3257, 3258, 3259, 3260, 3261, 3262, 3263, 3264, 3265, 3266, 3267, 3268, 3269, 3270, 3271, 3272, 3273, 3274, 3275, 3276, 3277, 3278, 3279, 3280, 3281, 3282, 3283, 3284, 3285, 3286, 3287, 3288, 3289, 3290, 3291, 3292, 3293, 3294, 3295, 3296, 3297, 3298, 3299, 3300, 3301, 3302, 3303, 3304, 3305, 3306, 3307, 3308, 3309, 3310, 3311, 3312, 3313, 3314, 3315, 3316, 3317, 3318, 3319, 3320, 3321, 3322, 3323, 3324, 3325, 3326, 3327, 3328, 3329, 3330, 3331, 3332, 3333, 3334, 3335, 3336, 3337, 3338, 3339, 3340, 3341, 3342, 3343, 3344, 3345, 3346, 3347, 3348, 3349, 3350, 3351, 3352, 3353, 3354, 3355, 3356, 3357, 3358, 3359, 3360, 3361, 3362, 3363, 3364, 3365, 3366, 3367, 3368, 3369, 3370, 3371, 3372, 3373, 3374, 3375, 3376, 3377, 3378, 3379, 3380, 3381, 3382, 3383, 3384, 3385, 3386, 3387, 3388, 3389, 3390, 3391, 3392, 3393, 3394, 3395, 3396, 3397, 3398, 3399, 3400, 3401, 3402, 3403, 3404, 3405, 3406, 3407, 3408, 3409, 3410, 3411, 3412, 3413, 3414, 3415, 3416, 3417, 3418, 3419, 3420, 3421, 3422, 3423, 3424, 3425, 3426, 3427, 3428, 3429, 3430, 3431, 3432, 3433, 3434, 3435, 3436, 3437, 3438, 3439, 3440, 3441, 3442, 3443, 3444, 3445, 3446, 3447, 3448, 3449, 3450, 3451, 3452, 3453, 3454, 3455, 3456, 3457, 3458, 3459, 3460, 3461, 3462, 3463, 3464, 3465, 3466, 3467, 3468, 3469, 3470, 3471, 3472, 3473, 3474, 3475, 3476, 3477, 3478, 3479, 3480, 3481, 3482, 3483, 3484, 3485, 3486, 3487, 3488, 3489, 3490, 3491, 3492, 3493, 3494, 3495, 3496, 3497, 3498, 3499, 3500, 3501, 3502, 3503, 3504, 3505, 3506, 3507, 3508, 3509, 3510, 3511, 3512, 3513, 3514, 3515, 3516, 3517, 3518, 3519, 3520, 3521, 3522, 3523, 3524, 3525, 3526, 3527, 3528, 3529, 3530, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3538, 3539, 3540, 3541, 3542, 3543, 3544, 3545, 3546, 3547, 3548, 3549, 3550, 3551, 3552, 3553, 3554, 3555, 3556, 3557, 3558, 3559, 3560, 3561, 3562, 3563, 3564, 3565, 3566, 3567, 3568, 3569, 3570, 3571, 3572, 3573, 3574, 3575, 3576, 3577, 3578, 3579, 3580, 3581, 3582, 3583, 3584, 3585, 3586, 3587, 3588, 3589, 3590, 3591, 3592, 3593, 3594, 3595, 3596, 3597, 3598, 3599, 3600, 3601, 3602, 3603, 3604, 3605, 3606, 3607, 3608, 3609, 3610, 3611, 3612, 3613, 3614, 3615, 3616, 3617, 3618, 3619, 3620, 3621, 3622, 3623, 3624, 3625, 3626, 3627, 3628, 3629, 3630, 3631, 3632, 3633, 3634, 3635, 3636, 3637, 3638, 3639, 3640, 3641, 3642, 3643, 3644, 3645, 3646, 3647, 3648, 3649, 3650, 3651, 3652, 3653, 3654, 3655, 3656, 3657, 3658, 3659, 3660, 3661, 3662, 3663, 3664, 3665, 3666, 3667, 3668, 3669, 3670, 3671, 3672, 3673, 3674, 3675, 3676, 3677, 3678, 3679, 3680, 3681, 3682, 3683, 3684, 3685, 3686, 3687, 3688, 3689, 3690, 3691, 3692, 3693, 3694, 3695, 3696, 3697, 3698, 3699, 3700, 3701, 3702, 3703, 3704, 3705, 3706, 3707, 3708, 3709, 3710, 3711, 3712, 3713, 3714, 3715, 3716, 3717, 3718, 3719, 3720, 3721, 3722, 3723, 3724, 3725, 3726, 3727, 3728, 3729, 3730, 3731, 3732, 3733, 3734, 3735, 3736, 3737, 3738, 3739, 3740, 3741, 3742, 3743, 3744, 3745, 3746, 3747, 3748, 3749, 3750, 3751, 3752, 3753, 3754, 3755, 3756, 3757, 3758, 3759, 3760, 3761, 3762, 3763, 3764, 3765, 3766, 3767, 3768, 3769, 3770, 3771, 3772, 3773, 3774, 3775, 3776, 3777, 3778, 3779, 3780, 3781, 3782, 3783, 3784, 3785, 3786, 3787, 3788, 3789, 3790, 3791, 3792, 3793, 3794, 3795, 3796, 3797, 3798, 3799, 3800, 3801, 3802, 3803, 3804, 3805, 3806, 3807, 3808, 3809, 3810, 3811, 3812, 3813, 3814, 3815, 3816, 3817, 3818, 3819, 3820, 3821, 3822, 3823, 3824, 3825, 3826, 3827, 3828, 3829, 3830, 3831, 3832, 3833, 3834, 3835, 3836, 3837, 3838, 3839, 3840, 3841, 3842, 3843, 3844, 3845, 3846, 3847, 3848, 3849, 3850, 3851, 3852, 3853, 3854, 3855, 3856, 3857, 3858, 3859, 3860, 3861, 3862, 3863, 3864, 3865, 3866, 3867, 3868, 3869, 3870, 3871, 3872, 3873, 3874, 3875, 3876, 3877, 3878, 3879, 3880, 3881, 3882, 3883, 3884, 3885, 3886, 3887, 3888, 3889, 3890, 3891, 3892, 3893, 3894, 3895, 3896, 3897, 3898, 3899, 3900, 3901, 3902, 3903, 3904, 3905, 3906, 3907, 3908, 3909, 3910, 3911, 3912, 3913, 3914, 3915, 3916, 3917, 3918, 3919, 3920, 3921, 3922, 3923, 3924, 3925, 3926, 3927, 3928, 3929, 3930, 3931, 3932, 3933, 3934, 3935, 3936, 3937, 3938, 3939, 3940, 3941, 3942, 3943, 3944, 3945, 3946, 3947, 3948, 3949, 3950, 3951, 3952, 3953, 3954, 3955, 3956, 3957, 3958, 3959, 3960, 3961, 3962, 3963, 3964, 3965, 3966, 3967, 3968, 3969, 3970, 3971, 3972, 3973, 3974, 3975, 3976, 3977, 3978, 3979, 3980, 3981, 3982, 3983, 3984, 3985, 3986, 3987, 3988, 3989, 3990, 3991, 3992, 3993, 3994, 3995, 3996, 3997, 3998, 3999, 4000, 4001, 4002, 4003, 4004, 4005, 4006, 4007, 4008, 4009, 4010, 4011, 4012, 4013, 4014, 4015, 4016, 4017, 4018, 4019, 4020, 4021, 4022, 4023, 4024, 4025, 4026, 4027, 4028, 4029, 4030, 4031, 4032, 4033, 4034, 4035, 4036, 4037, 4038, 4039, 4040, 4041, 4042, 4043, 4044, 4045, 4046, 4047, 4048, 4049, 4050, 4051, 4052, 4053, 4054, 4055, 4056, 4057, 4058, 4059, 4060, 4061, 4062, 4063, 4064, 4065, 4066, 4067, 4068, 4069, 4070, 4071, 4072, 4073, 4074, 4075, 4076, 4077, 4078, 4079, 4080, 4081, 4082, 4083, 4084, 4085, 4086, 4087, 4088, 4089, 4090, 4091, 4092, 4093, 4094, 4095, 4096, 4097, 4098, 4099, 4100, 4101, 4102, 4103, 4104, 4105, 4106, 4107, 4108, 4109, 4110, 4111, 4112, 4113, 4114, 4115, 4116, 4117, 4118, 4119, 4120, 4121, 4122, 4123, 4124, 4125, 4126, 4127, 4128, 4129, 4130, 4131, 4132, 4133, 4134, 4135, 4136, 4137, 4138, 4139, 4140, 4141, 4142, 4143, 4144, 4145, 4146, 4147, 4148, 4149, 4150, 4151, 4152, 4153, 4154, 4155, 4156, 4157, 4158, 4159, 4160, 4161, 4162, 4163, 4164, 4165, 4166, 4167, 4168, 4169, 4170, 4171, 4172, 4173, 4174, 4175, 4176, 4177, 4178, 4179, 4180, 4181, 4182, 4183, 4184, 4185, 4186, 4187, 4188, 4189, 4190, 4191, 4192, 4193, 4194, 4195, 4196, 4197, 4198, 4199, 4200, 4201, 4202, 4203, 4204, 4205, 4206, 4207, 4208, 4209, 4210, 4211, 4212, 4213, 4214, 4215, 4216, 4217, 4218, 4219, 4220, 4221, 4222, 4223, 4224, 4225, 4226, 4227, 4228, 4229, 4230, 4231, 4232, 4233, 4234, 4235, 4236, 4237, 4238, 4239, 4240, 4241, 4242, 4243, 4244, 4245, 4246, 4247, 4248, 4249, 4250, 4251, 4252, 4253, 4254, 4255, 4256, 4257, 4258, 4259, 4260, 4261, 4262, 4263, 4264, 4265, 4266, 4267, 4268, 4269, 4270, 4271, 4272, 4273, 4274, 4275, 4276, 4277, 4278, 4279, 4280, 4281, 4282, 4283, 4284, 4285, 4286, 4287, 4288, 4289, 4290, 4291, 4292, 4293, 4294, 4295, 4296, 4297, 4298, 4299, 4300, 4301, 4302, 4303, 4304, 4305, 4306, 4307, 4308, 4309, 4310, 4311, 4312, 4313, 4314, 4315, 4316, 4317, 4318, 4319, 4320, 4321, 4322, 4323, 4324, 4325, 4326, 4327, 4328, 4329, 4330, 4331, 4332, 4333, 4334, 4335, 4336, 4337, 4338, 4339, 4340, 4341, 4342, 4343, 4344, 4345, 4346, 4347, 4348, 4349, 4350, 4351, 4352, 4353, 4354, 4355, 4356, 4357, 4358, 4359, 4360, 4361, 4362, 4363, 4364, 4365, 4366, 4367, 4368, 4369, 4370, 4371, 4372, 4373, 4374, 4375, 4376, 4377, 4378, 4379, 4380, 4381, 4382, 4383, 4384, 4385, 4386, 4387, 4388, 4389, COMPUTERVIEW

THE Berlaymont Building in Brussels is a monument to the triumph of hope over experience. Therein sit the incurably optimistic members of the EEC Commission, dreaming up endless schemes for the enhancement of the Community's place in the world, apparently unchastened by the fact that their splendid notions are almost invariably shot down by the Council of Ministers, or at best crippled by parsimonious budget slashing.

Last week and this we have reported the Commission's proposals for an EEC plan for microelectronics and for telecommunications. Eminent sensible and reasonable they are, too. The microelectronics plan is to be welcomed for its clear-sighted recognition that Europe has to take a great technological leap if it is to catch up with the Japanese and the Americans in microelectronics.

Instead of proposing investment of public funds in the manufacture of 64K or even 256K RAMs, it says "Let us create the infrastructure which will enable us to make from our own resources and with our own technology, LSI circuits which will be competitive with those being made in the US and Japan, in 1985."

The sum being requested is modest, given the scale of the problem; the Commission took as its model the US Department of Defence programme which was approved at the end of last year, runs for six years and allocates \$210 million to the development of ultra-high speed integrated circuits.

However, money is by no means the only prerequisite

A policy for Eurochips

for a successful policy. The Commission points out that between 1974 and now, the combined investment of the UK, France, Germany and Italy in national microelectronics support amounts to 360 million units of account, \$220 million. The net result is that 65 per cent of integrated circuits used in Europe are imported, despite a general tariff barrier of 17 per cent, while some types of circuit have to be allowed in duty-free because they are not obtainable in Europe.

By contrast, the Japanese programme set up in 1976, and involving 180 million units of account, £110 million, over four years, was enough to enable Japan to catch up with America, and to win 40 per cent of the world market for widely used chips.

Clearly the Japanese are better at getting value for money than we are, and the reason is not hard to find. In spite of the fact that the big five Japanese manufacturers - NEC, Hitachi, Fujitsu, Toshiba and Mitsubishi - fight each other like Kilkenney cats in the commercial marketplace, the omnipotent Japanese Ministry of

International Trade and Industry was able to pool their resources to come together to pool their resources, thereafter to take the results back to their own companies and apply them.

By contrast, if one takes a European view, it is money that is the problem. The Commission has been squandering as companies in each country backed to duplicate research and re-invent the wheel. If we are to succeed, says the Commission, the government is not going to fund Siemens or Intel. But at least, let us have a co-ordination of research and products we are going to need, instead of inadequate implementations of one or two technologies quintuplicated all over Europe.

The Commission is seeking up to £30 million over four years from EEC funds to match an equivalent investment from national governments.

Its proposals for Europe-wide procedures, telephone equipment, and for a European network, will be usable with all public data networks planned in Europe, are equally desirable.

The plans look sensible and thoroughly workable even if they were not set against the absurdities of mountains and wine lakes. We can only urge the Commission to adopt them at the first opportunity.

LETTERS to the EDITOR

Standards for open systems interconnection

TOO few people in the UK are helping to develop standards for open systems interconnection and consequently the UK is finding it increasingly difficult to contribute at the international level.

An open computer system allows any computer program, terminal or end-user to communicate with any other on the system, and be understood. Most users welcome the freedom that an open system will give, the most important benefit being that it allows information to be exchanged between different machines made by different manufacturers and under the control of different organisations. However, standards must first be agreed among the suppliers of hardware and soft-

ware, but will these standards really benefit the end-user if he is not involved in their specification?

The British Standards Institution committee on open systems interconnection, DPS/20, believes that as wide a selection of interests as possible should be involved.

To this end, I am appealing through the columns of Computer Weekly for people who would be willing to contribute to the work. In the following areas: the specification of the structure for a communications architecture; the design of protocols to manage functions concerned with remote system start-up, termination, data integrity, authentication and security; the development of a network-

independent transport service; the specification of a virtual terminal service to insulate programs from the characteristics of real terminals; the study of a standard service for file transfer, access and management.

Computer users who are interested and feel they may be able to contribute to the work are invited to contact me for further information.

KIRK GEE
Chairman of Working Group 6 of BS/DPS/20
National Computing Centre,
Oxford Road, Manchester M1 7ED.

Well done

I HAVE been reading with interest the series on Advanced File design, especially Part 14 (CW, July 17). We have had a large database system operating for some years, and the problems outlined in the articles and their suggested solutions have all occurred to us. The articles read like a list of our problems.

Congratulations on a series which is not only theoretical but also practical.

A. V. F. BRANNAN
Director
Brannan Thermometers,
Cleator Moor, Cumbria

1984 and all that...

THIS week's example of the strange things people say in the media about computers was sent in by Mike Eaton of the NCC, who writes:

A smaller version of IBM's portable computer system is being planned for the US in direct competition to the programmable calculator market. However, this will only happen when a printer attachment is available and a not expected until the end of the year. The US version is expected to be the size of a pocket electronic typewriter.

GOVERNMENT COMPUTER REQUIREMENTS

GOVERNMENT OF THE UNITED KINGDOM
MINISTRY OF DEFENCE
ROYAL SIGNALS AND RADAR ESTABLISHMENT
MALVERN - Ref. No. CP 18/85/0W

A computer system is required to be installed at Malvern to record and disseminate information about electronic components with terminals at Portsmouth, Portland and London. It is intended that certain commercial firms should be allowed to interrogate data held in the system by connection to their own computers. The provision is required of both system software and hardware. Installation is required about March 1981.

Applications for copies of the Operational Requirements should be sent to the CENTRAL COMPUTER AND TELECOMMUNICATIONS AGENCY (CCTA), 10, GERRARD HOUSE, 10, GERRARD LANE, NORWICH NR1 1DW, quoting the Reference No. shown above. Complete proposals should be received not later than 22 August 1980.

Applications for copies of the Operational Requirements should be sent to the CENTRAL COMPUTER AND TELECOMMUNICATIONS AGENCY (CCTA), 10, GERRARD HOUSE, 10, GERRARD LANE, NORWICH NR1 1DW, quoting the Reference No. shown above. Complete proposals should be received not later than 22 August 1980.

Two-year wait for a programmer

I HAVE just read Page Six (CW, June 26), and although I'm sure KBS do a fine job, I should like to state my own case to show how difficult it can still be for a would-be applicant.

I have well over five years' operating behind me, more recently in the contract field, but would like to find a way into programming.

On inquiring at the employment bureau which deals with TOPS courses I was told "There's a two year waiting list." As short and sweet as that.

With this kind of governmen-

tal reaction it's no wonder Britain is beginning to lose its European computer 'top mentioned' in Computer magazine the same CW issue.

Recession blamed for Redifon lay-offs

REDIFON Computers has made 70 manufacturing and administrative staff redundant at its Crawley and Peacehaven, Sussex, factories because sales in the UK are not as high as the company expected. Redifon said it had been necessary to revise its business plan "to match resources to demand" and blamed what it considered to be a recession in the UK market.

Redifon said that demand overseas for its systems was not growing fast enough to use all of its UK labour capacity.

Redifon also cited new technology employed in its latest products, particularly the R1800 office system (CW, July 17). The company says this technology made its manufacturing less labour-intensive, so that the redundancies would increase productivity and reduce product costs.

Jobs were found for some of the redundant staff within the two other firms in the Redifon group, Redifon Simulation and Redifon Telecommunications.

Redifon's announcement follows closely on NCR's admission that it had axed 40 jobs in its commercial and industrial marketing division (CW, July 17).

However, Redifon is still expanding its product line with the announcement of the R1800/30 two weeks ago and the news from managing director Mike Aldrich that a fully-fledged shared logic word processing system is on its way. Aldrich describes the company's aim as "second generation word processing", in which there will be more integration between WP and DP, and in which text can be manipulated in elaborate new ways.

A new word processing terminal is being developed.

Integration of voice into the office system, which other companies such as Nexos and Datapoint are working on, will come later, Aldrich says.

The processor in the R1800/30 is the smallest of three in Redifon's new R4000 range of 16-bit minicomputers. It cycles at 1,200 nanoseconds and currently supports up to 96K-bytes of memory. The next processor up cycles at 800 nanoseconds, and the top model at 400 nanoseconds.

The smaller two are built in TTL-LSI logic and the top model uses bit-slice microprocessors. The instruction set is an extension of that in the R3000 minicomputer, itself developed from the DDC 118 mini, which was copied from the Data General Nova.

All the existing Redifon software apart from that for the R2000 mini used in the large Keycheck key-to-disc systems runs on the R4000 line.

A new word processing terminal is being developed.

Integration of voice into the office system, which other companies such as Nexos and Datapoint are working on, will come later, Aldrich says.

The processor in the R1800/30 is the smallest of three in Redifon's new R4000 range of 16-bit minicomputers. It cycles at 1,200 nanoseconds and currently supports up to 96K-bytes of memory. The next processor up cycles at 800 nanoseconds, and the top model at 400 nanoseconds.

The smaller two are built in TTL-LSI logic and the top model uses bit-slice microprocessors. The instruction set is an extension of that in the R3000 minicomputer, itself developed from the DDC 118 mini, which was copied from the Data General Nova.

All the existing Redifon software apart from that for the R2000 mini used in the large Keycheck key-to-disc systems runs on the R4000 line.

Redifon's announcement follows closely on NCR's admission that it had axed 40 jobs in its commercial and industrial marketing division (CW, July 17).

However, Redifon is still expanding its product line with the announcement of the R1800/30 two weeks ago and the news from managing director Mike Aldrich that a fully-fledged shared logic word processing system is on its way. Aldrich describes the company's aim as "second generation word processing", in which there will be more integration between WP and DP, and in which text can be manipulated in elaborate new ways.

Norway air traffic control system

A NATIONWIDE air traffic control support network is being implemented in Norway under a 23.6 million Kroner, £2 million, contract with Siemens.

The network, to carry air traffic movement, meteorological and administrative data, will be built around a central database in Bergen, and Norsk Data is supplying two Nord 100 minicomputers to run the database, plus 44 further Nord 100s, one at each Norwegian airfield.

Norsk Data's share of the contract is worth 8.2 million Kroner, £880,000. The database configuration will consist of one live and one standby mini, linked to the network via a dual Siemens EDX-M data switching system. The terminal control unit at each airfield will consist of the mini plus up to 16 terminals. These will comprise a Tandberg display and a low noise Siemens PT80 printer.

Interconnection will be at 2400 bps over the planned Norwegian public data network, Nopon, which will initially be circuit switched, but will later add X25 packet switching.

All the existing Redifon software apart from that for the R2000 mini used in the large Keycheck key-to-disc systems runs on the R4000 line.

Redifon's announcement follows closely on NCR's admission that it had axed 40 jobs in its commercial and industrial marketing division (CW, July 17).

However, Redifon is still expanding its product line with the announcement of the R1800/30 two weeks ago and the news from managing director Mike Aldrich that a fully-fledged shared logic word processing system is on its way. Aldrich describes the company's aim as "second generation word processing", in which there will be more integration between WP and DP, and in which text can be manipulated in elaborate new ways.

Downtime

by Chad

Exit, pursued by a theory

THE pull-the-wings-off-the-butterfly people have been at it again, with all this trying to prove by computer that Shakespeare was the author of a hitherto anonymous (and incidentally second rate) play. After the hallyhoo over the authorship of "The Book of Sir Thomas More" had died down we were left with established scholars accusing the proponents of the new theory of being sloppy and jumping the gun, while the newcomers in turn complained that they were excluded from publication by vested interests.

I have this awful feeling of having been here before. Years ago a friend of mine tried to turn me on to a book that proved beyond a shadow of a doubt that Shakespeare was all written by Christopher Marlowe. It did this by measuring the average length of words in various plays to 93 decimal places, and comparing them. My friend was most scornful when I remained unconvinced — I must be some ignorant savage still to disbelieve after Unerring Science has spoken.

(The theory did, by the way, allow for the fact that Marlowe died half way through Shakespeare's career. Marlowe's murder was supposed to have been faked to allow him to escape from some enemies. What wasn't allowed for was the fact that if you read the plays instead of counting the blasted letters you realise that Marlowe and Shakespeare were totally different people.)

Anyway the Marlowe theory is now discredited. I am told, because the mathematics was unsound in some way or other. But if that is the case, how can simple souls such as you or I be sure that there isn't a sinister error in the latest pronouncements? I am sceptical as was Diderot about "lies, damned lies, and statistics", and I get very worried about these people who say "The

significance level of my figures proves the following is true about the world. . . ." This gets very dodgy over such contentious issues as the efficacy of comprehensive schools.

The present theory is based on the work of the Rev Andrew Morton, who has explained his ideas in detail in an article in Computer Weekly (CW, August 9, 1979). The analysis uses the "word habits" of writers, that is, how often they use certain combinations of words and certain other words to start sentences. Morton is used to being regarded as a crack brain by traditional academics, but he gets very browned off at those who say "If you can show your method works with (say) Dickens, I'll believe you." Morton then shows it does work, and lo and behold the academics find another reason not to accept it.

It was Thomas Merriam, an historian at Basingstoke Technical College, who did the work on "Sir Thomas More". He agrees that some of his samples may be too small, but insists that he still gets plenty of reliable results. In the meantime he is having difficulty getting his work published so that people can judge it on its merits.

Stanley Wells of the Oxford University Press points out other difficulties, such as the fact that if you read the plays instead of counting the blasted letters you realise that Marlowe and Shakespeare were totally different people.)

Also, how can you analyse the first words of sentences when Shakespeare never wrote any punctuation? The full stops were put in by the printers. Wells concludes by saying, "Lots of literary scholars are suspicious of computers." Now that can't be a bad thing.

MICHIE'S PRIVATEVIEW

COMPUTER people engaged in burking up the tree of knowledge will have been more than a little dumfounded by the view taken of computer-stored information by three Appeal judges in the case of the Crown versus Pettigrew, accused of stealing banknotes. Three fivers in his possession had serial numbers matching a list printed out by the Bank of England computer. To be admissible, according to the 1965 Criminal Evidence Act, a document must be prepared by someone with knowledge of its contents. A computer cannot be regarded, so the Appeal Court ruled, as having "knowledge" in this sense.

Something, either in the state of the law or in received notions of what constitutes knowledge, must be very seriously wrong. Yet Examining Boards down the ages have made no bones about knowledge. If the candidate can correctly retrieve the requested information, then he is credited with knowledge of it, and hence with knowledge of the contents of any document he prepares in his attempt to satisfy the examiners. Why the Bank of England computer's print-out should be flunked in the analogous case seems mysterious.

Doubtless the computer itself generated in the first place the numbers which it subsequently knew, or did not know. But in the examination room this is never a disqualifier.

I recall Practical Electricity in my Physics Prelims. I had concluded by prior study of statistical distributions that the chance of having an electricity experiment was small. In horror I saw the words, "Use the apparatus provided to verify Ohm's Law."

What Law? And how on earth was this contraption to be wired up, let alone used?

Don't bank on knowing how to define knowledge . . .

First hurdle: announce that the apparatus supplied is unusable. In relative terms and taking all things into account it certainly was. The investigator finally sorted it out, taking and recording in the process a great number of trial readings. So the second hurdle was a gift. Ohm's Law shone from the jottings so seductively that only an unfeeling cold could have failed to note, and duly verify, the beautiful regularity.

I thus received a satisfactory mark for my knowledge of Practical Electricity. So what is all this nonsense about the Bank of England's machine, even if a little computer creativity may have been involved somewhere along the line?

Before any reader chokes on the word "creativity", let me at once affirm that information cannot be created in the course of a computation although, alas, it can only too easily be destroyed. Does this mean that a computer cannot, through purely internal operations, add to its knowledge? If we continue to guide our definitions by Examining Board practice, it means nothing of the kind. It is the capacity to give correct

answers to questions: clear enough, one would think.

Clear enough with computers. For human knowledge-sources the matter can get tangled. The outraged husband, finding a nude man in his wife's bedroom wardrobe, barks at the intruder: "What the hell are you doing there?" "Everyone," comes the reply, "has got to be somewhere."

Does this rate 10 out of 10, or 0 out of 10? Certainly any intermediate mark would seem to be wrong. But how can a computer add to its knowledge without adding to its information? Suppose I load a prime factorisation program which, for integers up to a million, answers "Yes" or "No" according as the number concerned is composite or prime. I try it with 997 and after a while (this is a slow home computer) I get "No." So its "knowledge" extends at least to 997. What else does it know?

After input of 999,997 I get bored and go out, leaving it running. No marks out of ten. My program habitually enters its computed results into a look-up table before exit. So I am not amazed on my return when it now appears to know the

Professor Donald Michie is head of the Machine Intelligence Research Unit at Edinburgh University.

answer to 999,997 — replying instantly "Yes" by looking it up. Moreover it turns out also to know that 999,991 is composite, having failed hopelessly at an earlier trial. The seeming miracle is traced to its use, for speeding up the computation of the new-found prime-numbers at 997.

On any reasonable definition, knowledge is here being created and used. Yet information remains constant, being fully contained in the original program. What, then, changes? Simply the size of that fraction of the total information which can be mobilised fast enough to satisfy the examiners.

With all respect to Mr Pettigrew and to the Crown, the Lords of Appeal may have a long row to hoe. REFERENCES Michie, D. (1988) Memo function and machine learning. *Machine Intelligence*, 218, 18-22. £300 award to essay winner

JOHN FINNIE (right) of Bohlhill, who worked for GKN Group Management Services, has won this year's IDPM/Langton essay competition on the practical implications of office automation. He is seen here receiving his prize of a silver tray and £300 from Geoff Dale, head of British Telecom's telematics division.

Second prize went to Frank Bousif of Abbots Langley, Herts, while David Reed of Barnet, Herts, a consultant with CAP-CP, won third prize.

The judges were Geoff Dale; Roy Cross, director-general of the British Institute of Management; Dr Doug Eyskens, director-general of the Computing Services Association; Bill Herndon, vice-president of operations at Citibank; Brian Manley, managing director of Philips Business Systems; Barrie Sherman, director of research at ATMS; and consultant Eric Watson, who was last year's winner.

IDPM subscription up 17 per cent

AT a confusing annual meeting of the Institute of Data Processing Management in London last week, an increase in subscriptions of about 17% was approved on the nod. There were about 80 members present who raised many points on the finances of the institute during the meeting.

Ex-BCS president, Gerry Fisher called for conferences and seminars, which lost about £1,000 last year, to break even in future and to be costed on the basis of a minimum attendance. He also suggested that it was wrong for the Institute to budget for a profit on examinations and advocated that these should be run on a subsidy to encourage people to become professional members.

Alan Simpson, a former In-

stitute press officer, commented on the cost of nearly £7,000 for the year book and asked why, with all the adverts in it, it had not made a profit.

Secretary-general Ted Cluff said if the members wanted a year book and magazine of the present quality it involved high costs and postage.

A proposed change of rules drawn up by the Institute's solicitor aimed to allow postal ballots for vacancies on the council. This was agreed, but members were concerned that this could lead to one branch dominating the council. There was a call for the single transferable vote to be used and for the election to be supervised by the Electoral Reform Society.

Cluff said he would put a proposal for this method of voting before the 1981 annual meeting. He added that he hoped to be able to have full copies of the Institute's rules ready after that meeting.

IBM rivals 'unperturbed' by launch of Displaywriter

IBM's competitors in word processing have been largely unperturbed by the company's long-awaited announcement of the Displaywriter, a stand alone word processor with a full size screen (CW, June 28). The apparently low price of \$10,070 for a standard configuration is pointed out as entailing considerably more expense for software, training and support.

Some assistance is provided for users when the machine is purchased, but after that the services of a marketing support representative cost \$58 an hour. This unbundling is the start of a trend likely to be followed by other manufacturers. Pat de Cavaigne, president of Vidyec, commented: "We can't continue to offer consulting services free of charge."

Reaction to the product as a whole has been cool. A US spokesman from Wang said: "We were very underwhelmed at the pricing of the new product. IBM's Office Products Division had a morale problem because they had nothing to sell against the machines sold by Lanier (AES) and CPT."

"The IBM product will not affect our pricing or our marketing strategy, and with all those salesmen going out selling word processing, it is likely to increase our business rather than diminish it."

Harry Mallinson of AES Wordplex in the UK commented: "Four years after the advent of stand alone processors, IBM has produced a machine that works." He also thought that IBM's marketing efforts would generate more business for everybody.

IBM is emphatic that the Displaywriter is not intended to replace the small-screen Office System 6, pointing out that the System 6 has functions such as records processing and file merge that are not available on the new machine.

The Displaywriter uses an Intel 8086 16-bit processor chip, as does the forthcoming Nexos 2200 (CW, July 10) and the 26-line screen is made by Panasonic. The two models of daisy wheel printer offered are both of IBM design and manufacture, instead of the Qume unit IBM has been selling.

Observers feel the Displaywriter's features are not particularly impressive. US consultant Sanford Garrett said: "In terms of software and capabilities, Xerox and Wang systems have more flexibility, and have better search, scroll and sort capabilities."

IBM asserts that the lack of free training is not simply a component of the low price of the hardware. "Ease of use has made this training policy possible," said Ron Eich, office products director of product development.

Direct booking

COACH tours with the National Bus Company can now be booked directly into the Digital Equipment PDP-11/70 based reservations system from terminals in five regional offices of the company's travel agent subsidiary National Holidays.

The communications links use 11 statistical and time division multiplexers supplied by IAL, the communications subsidiary of British Airways.

FOCUS

on filling those DP vacancies

THE shortage of computer personnel is an established fact of DP life, and now a collection of polls, surveys and reports all agree that there is a serious shortage of DP manpower and that the recruitment problem appears to be escalating.

There is a current shortage of 16,000 analysts and programmers and 6,000 electronic engineers (CW, June 7), and vacancies for programmers are said to be increasing at a healthy rate of 500 per month.

So far, so good — at least for the DP professional and probably the advertisement managers of the computing Press. But while the recruitment marketplace is flourishing, the news is not so good for DP management who have to cope with ever-increasing workloads, fresh applications and lower budgets. In such circumstances, competing for scarce talent has become a challenge.

For the company, the problem is one of retraining experienced personnel in the face of aggressive recruitment offered by the competition. For the recruiting company, the problem is that of handling the attraction and ending job adverts and disengaging whatever might appear to be the current pay scales. For the individual, the challenge is the ability to step away from the comfort of the job and in an effort to discover the potential requirements of the position.

To the DP professional, it is only of fringe benefit interest to know that the recruiting company is situated in the new Covent Garden piazza in close proximity to Peppercorn Park and a keep-flamingo museum. What the individual would prefer is data on the rate of staff turnover; the amount of care and attention required for existing programs and routines; and the mix of computing technologies and equipment being utilised.

In the meantime, the service industry is busy taking advantage of the installation misfortune. DPMs are having to contract out their systems requirements. If they are to meet time and budget factors, this pressure is in fact growing, as users insist more and more that their jobs are completed on schedule.

Often these new applications involve advanced level technologies which in many cases can only be handled by specialist system houses. In such cases, the cost could well be less sensitive matter than that of the confidence of delivery. By tradition, much of the computer industry operates a recruitment by knocking policy. Basic training is limited to in-house personnel, otherwise it is a matter of cheap book-keepers and typists, while footfall, only the individual concerned and his/her company benefits. Apart from such organisations as the clearing banks and

government installations, which have adequate funds and resources available for prime training, most companies which wish to avoid joining the recruitment merry-go-round have to rely on an intake of graduates from universities and colleges. State schemes such as TOPS and Threshold can only make a limited contribution to the supply of pre-trained recruits, as can the various computer training schools.

At a time when the computer industry is one of the few ex-

panding areas of recruitment in the UK, the industry should be setting about offering job opportunities to unemployed school leavers — particularly those from the more depressed areas of the country. Providing the necessary training will need some immediate constructive action by such responsible bodies as the British Computer Society and the NCC. With both unemployment and DP job vacancies soaring, a merger and sort program is an urgent requirement.

First woman on council

FIRST woman member of the executive council of the IDPM was elected at the annual meeting. She is Elizabeth Payne, 29, who is an analyst/programmer at Sheerness Steel in Kent. She has been in DP for five years, has a law degree, and says she hopes to bring "youthful vigour" to the council.

One third of the council seats were up for election and the other four elected were Ray Hill of ICL.

Philip Maylor of De Havilland College, Colin Smith who is a DP manager and consultant, and Vio Thorogood, who has over 30 years' experience of data processing.

Due to a constitutional quirk, secretary-general Ted Cluff had to stand again and was elected unopposed. The council will be recommending rule changes to regularise Cluff's full-time position.

Dutch group seeks to pool 4300 experience

ALTHOUGH billed as being dramatically easier to use than its predecessors, the IBM 4300 series has had many users fazed, and tales of problems with some of the new software abound.

A Dutch group is seeking to pool user experience in the implementation of 4300 systems and would like to fly over UK users to give presentations. The forum is an offshoot of the user group of a Dutch software house, Share Nederland BV, of Amsterdam, which specialises on IBM systems and is part-owned by its biggest customers.

The forum was established as part of the user group activity. These major customers, and currently has 88 4300 users and prospective users.

These are held every two months and so far have had presentations from 10,480 users. The minutes of the meetings are distributed free, but are in Dutch, although presentations in English will be welcomed.

range of experience from which it can learn, but UK companies would be welcome to join membership is free. There is no marketing activity at the meetings, either from IBM or independents, and the forum is run by the members. It has been welcomed by Guide, the worldwide IBM user group as being complementary to Guide's activities. Despite the name, Share Nederland has no connection with the other IBM user group, Share.

People wanting more information about the group, prepared to give presentations or wanting to receive presentations should contact Robert Vagstad, Share Nederland BV (CW), P.O. Box 100, 1017 BL Amsterdam, Tel: (from UK) 01031-20-796011, Telex 18888 SHARE.

More linked to police system

MANY police stations are now linked to the police national computer via the police private telegraph network using Ascot to telex code converters from Midland of Belper, Derby.

The order placed by Telecom

From Kodak a laser printer

A laser printer with a print-out speed equal to the best available today, but at a third of the capital cost has got to be good news.

And when it slashes running costs by up to seven times — can you afford not to investigate further?

The KODAK Komstar Microimage Processor Model 200 is an on-line laser printer which writes data on to microfilm at a cost of about 62p per 1000 pages. Comparable paper print-out could cost £4.00.

Unlike earlier COM devices, there is "no wet-chemical development. Not even developer and toner — this laser printer is completely dry. So now the speed and economy of COM itself can be applied in the computer room to dumps and SYSOUT where conventional photographic COM was just not suitable.

To find out more, just fill in the coupon or ring Roger Highmoor on Hemel Hempstead (0442) 61122 extension 214.

To Roger Highmoor, Kodak Limited, Micrographic Sales PO, Box 56, Hemel Hempstead, Herts. HP1 1JU. Please send me full details of the Komstar Microimage Processor.

Here's some ammunition to fire back at 'poor productivity' critics

SENSITIVE programmers must find themselves on the brink of paranoia as more and more people stand up at conferences and belabour them for their poor productivity. Everything is smaller, faster, better — annual growth rates of 15% to 30% abound in the industry. Everyone is pulling their weight except the poor beleaguered programmer, whose productivity it is claimed has risen a mere 3% a year over the past 25 years.

Well, it seems you have an ally at last. Managers are scarcely able to agree what the product of your labours are, let alone agree on a common way of measuring productivity. That is the view of Thore Thoresen, of the New York consultancy Applied Computer Techniques.

Speaking at the Online Future Systems Forum in London, Thoresen chose to define the product as source code, object code, JCL procedure and documentation. "But there are no standards by which to quantify productivity. By convention, the size of a program is measured in number of lines of source code. The punched card is dead, but its ghost will linger on for many years yet. Again, sometimes numbers of lines of code and numbers of statements are interchangeable, sometimes they are not."

"Other people, though, say that object code is a better measure and they count it in bytes. But the amount of object code produced is a function of the number of variables such as the quality of the compiler and the individual quirks of the programmer."

"So we have a number of ways of measuring the size of a program. What about cost?"

"We tend to use man-months as a measure of cost. But other factors such as computer time contribute to costs and are variable. And when you choose to measure productivity in number of lines of code per man-month there is disagreement as to what constitutes a line. Some organisations count the blank lines put in for elegance, others do not. Some count macros as lines, others wait for the macro to be expanded before counting. Man-month accounting practices vary from organisation to organisation."

"So, by default, the industry has arrived at a measure of pro-

ductivity which involves dividing one very fuzzy unit of measurement by another. The result is very unreliable indeed," declared Thoresen.

"The best it can do is to give a measure of trends in productivity in a single organisation which has used the same standard of measurement over several years."

"An enormous number of other factors influence productivity: the larger the program, the lower the productivity is likely to be. The more people put on to different parts of the program, the more the productivity lost in the overhead of people

interactions. Program complexity, choice of access method used affect productivity. There can be an order of magnitude difference between the effort needed for a batch program and an interactive one."

"The performance constraints on the system — fast response times, requiring shorter path lengths, the resource constraints, the reliability constraints, all affect productivity."

"Then there is the proficiency of the individual programmer, affected by intellect, motivation, experience. Are there any development tools available? Are they any good?"

Thoresen's next point will strike a chord with most programmers and probably applies to most readers of Page Six.

"Programming is an intellectual task requiring enormous concentration. Yet 98% of applications programmers work in places which were never designed for programming, where the white noise, the discrete noise levels are far too high."

So next time you hear somebody moaning about low programmer productivity, be ready to come back with a few of the challenging arguments of Thore Thoresen.

'Our best hope lies in Ada'

THORE THORESEN presented the forum with a charming review of the progress of programming through the ages before outlining some of the methods which have been adopted to create some order out of the chaos of program development.

"In the early days, before 1960, there was very little commercial programming, and the programmer worked at the machine code level, picking up zeros and ones with tweezers and putting them into holes. Then came high level languages. It was marvellous. Suddenly anyone could be a programmer. — defrocked ministers, frustrated housewives. Programming became a sort of folk art."

"But by 1965, corporations became very disenchanted. Nobody knew what software was. It was intangible stuff. They ended up defining it as that which is never delivered on time, is never delivered at the promised cost, and never works when delivered."

"Around about 1970, software engineering appeared on the scene to solve all the problems. It sounded great: the name implied a unified discipline, but in reality it was a

collection of disjointed techniques, each attacking one aspect of the development process."

"In the beginning, large projects were built in the same way that the Wright Brothers built their aeroplanes. You built the system, pushed it over a cliff, watched it crash and then went back to the drawing board. The top-down development approach which allowed the project to be broken down into pieces that could be tested as you went, appalled engineers who didn't believe in starting a building with the ceiling. But in fact it is a reasonable approach."

"Then there is the structured walk-through, where the programmer presents his program to his peers, who proceed to tear it to pieces — and that approach can reduce the errors and discrepancies before it goes for testing."

"The chief programmer team approach recognises that in the development process, only a small part is coding, while a lot of it is administration."

"It is an attempt to mimic the surgical team, where one guy is in charge of putting the patient to sleep, another wields

the scalpel and there are a whole lot of nurses around to clear up the mess afterwards. It can be contrasted with the 200 programmer approach, where 200 programmers are thrown at the project and left to get on with it, which has been described as the hog butchering approach to development."

Nor was Thoresen very optimistic about the future. "Tools like structured programming can ease the problems, but they are often put in place without taking into account the human factor. Computer programmers are individualistic as a breed, and that goes against the disciplined principles of software engineering."

"We have to look at new methods of acquiring software — packages, automatic program generators do exist, but they only fit some applications."

As for non-procedural languages, Thoresen was very dismissive. "JCL is non-procedural and it's atrocious!" he declared.

As for natural languages, they were too ambiguous. "You wouldn't gain much if you replaced Cobol with English: who the hell can write

English?" he asked. The best hope he saw lay in the new Ada language.

"Ada integrates program specification and program implementation into the same language framework, so that you can compile the specification and the body of an Ada module separately and thus compile a complete specification tree and verify the functions of the modules. The replacement of one body with another requires no reprogramming or recompilation of any other part of the program. And the Ada compiler is intimately associated with a database of information describing the modules already compiled, thus automating the management of modular program design."

Despite its apparent attractions, Thoresen doubts that Ada will replace Cobol as the dominant business language in the 1980s, but it could affect the future development of Cobol. Ada will be the primary programming language on Intel's forthcoming iAPX 32-bit microprocessor (CW, July 10).

and Fortran. "Everything Fertig says is clearly true, but whether his last comment will be fulfilled in the next decade is very much open to question. More and more software is being written in Cobol, and as time goes by, more and more users who were once innovative are becoming diehards. Perhaps with good online development tools we may do away with coding sheets, but an awful lot more Cobol is going to be written before the language follows Fortran into the history books."

CONFERENCES Computer Graphics

BUSINESS graphics, drafting, terms and simulation are some of the topics to be treated at Computer Graphics 80, to be held at the Brighton Metropole from August 13-15. It is organised by Onyx. The conference will highlight developments during the decade since the University of London's Graphics Conference. Details from Onyx, Northwood Hill, Middlesex, HA1 1TS, tel: Northwood (0827) 2811.

STRUCTURED DESIGN

A technical briefing entitled Structured Design Methodology will be presented by Infotech from September 1-5 at the Holiday Inn, London. It is designed for DP staff responsible for evaluating potential innovations in systems and program design and Myers and Constantine as well as Jackson rules for program design, as well as subsidiary design languages. It will be given by Jeffrey Beal of Langton Information Systems, Nicosia, Chorton, an independent consultant, and John Buckle, European director of Sobush, further details are obtainable from Maurice Nichols, Infotech, Nicholson House, Maldenhead, Berks, tel: 0633 33001.

INTRODUCTION TO MINIS

A rapid introduction to minis systems is provided by IEE's vacation school, entitled Introduction to Small Computer Systems in Engineering Applications, to be held from September 7-12 at the University of Durham. The course is intended for young engineers, senior managers who are becoming involved with computers. Part One will cover basic design principles and Part Two, aspects from an overview of various types of computer to an appreciation of software. For details, contact the Institution of Electrical Engineers, Computing Control Division, Savoy Place, London WC2R 0BL. Tel: 01-240 1801.

ELECTRONIC DISPLAYS

Electronic Displays 80 is the 10th of the 16th International Exhibition and conference devoted to the technology of electronic displays. It will be held at the Mount Royal Hotel, London from September 3-7. The main subjects of the conference are: device technology, human factors and interactive displays; and display systems including the use of microcomputers. Further information from Network, Primrose Hill, London NW2 1JG, tel: 01-224 8227.

PERSONAL SHOW

The Personal Computer Show is taking place for the 10th time and will be held at the Grand Hotel, London from September 11-12. It is intended to provide a marketplace where the industry can display the myriads of which surround the word "computer" and enjoy the fact that computers are now which work for people, not just for the computer industry. The show is sponsored by Personal Computer Show and organised by Montbatten, 11 Montbatten Square, London W1M 5AB.

AUTOMOTIVE TECHNOLOGY

Isata 80 is the title of the 10th national symposium of automotive technology and automation, with particular emphasis on the use of computers in the automotive industry to be held from September 8-12 in Turin. It has the backing of the Isata-Comitato support Committee, made up of representatives from the public, motor industry and the automotive operation of Fiat. The conference language will be English. For details from Isata, 21 Lizard Park Avenue, Chesham, Bucks, tel: 01-893 8899 and 01-893 8898.

SOFTWARE FILE

Children profit from Pet

A PRIMARY school with its own microcomputer is selling programs for computer assisted learning to raise money for further computer equipment.

Deputy head Don Walton of Houghton County Primary School has developed programs covering a wide range of subjects for ages 4 to 13 years and the machine, a Commodore Pet is in use all day every day by the children, as well as after school hours for program development.

Headmaster Keith Lutton is as enthusiastic as his pupils, and keen to increase the limited machine time available at the moment.

Some of the boys have even mastered programming. But according to 10-year-old Richard Baldry, author of one of the programs for sale, "the girls don't seem keen on learning how to program."

Primary school programmers Andre Severs, Mark Cusley and Richard Baldry with Houghton County's overworked Pet microcomputer.

Q-Pac and teams sold

MANAGEMENT Science America is to buy the Q-Pac payroll system from its authors Q-Packaged Programs in South Africa.

The acquisition will include the UK and US marketing and support teams and the South African development team. But the South African parent company will continue to act as local agent for the payroll system, alongside MSA's subsidiary selling the existing MSA software.

MSA's UK managing director Dan Schmidt said: "In the last three years the market outside the US has provided an in-

creasing proportion of MSA's revenues. The MSA payroll software is not flexible enough to handle the different legal and tax requirements of this market so we had the choice of revamping it, starting again from scratch, or looking outside."

"We are buying what we believe to be the best product available to complete our range of international cash management products."

"Q-Pac will also be useful in the US because it can run on some hardware that cannot take the MSA system — for example the IBM System 34," he added.

Why more airlines switch to Univac

IBM is losing its airline customers to Univac, on the strength of the Univac Standard Airline System software. Finnair and Cathay Pacific have both switched to Univac, another national

Release 1 of IBM System Product

IBM's latest announcements of upgrades on all fronts for large systems and significant enhancements to MVS suggest that customers are being encouraged to embrace the 303X series wholeheartedly while users sit back and wait for H (CW, June 19).

The Job Entry Systems JES2 and JES3 are to be fully integrated into the MVS System Extensions, to be referred to as Release 1 of System Product MVS/SP.

SP Release 1, planned for January 1981, will give base support for the new disc devices 3375 and 3380, plus disc and data streaming channels. It also gives operator console support for the 3270 large screen and colour VDUs.

Also planned for January 1981 is the Data Facility/Data Set Services dump restore which will support the new disc devices with improved performance, allowing selective control, full volume dumps and dataset dump restore.

There will also be a Migration Aid for the direct access storage device to assist users converting to the 3375 and 3380. The product modifies existing JCL, directing it to the new discs and produces JCL for copying and backup, modifying and optimising on block sizes.

Planned for April 1981, the licensed program Data Facility/Extended Function will provide improved performance for MVS and a new catalogue structure in which volume ownership restrictions are lifted. It will allow data in VSAM catalogues to be organised with far more flexibility.

In September 1981 Release 3 of the Hierarchical Storage Manager is due, providing extra

control software for IBM's mass storage system which will support the new disc devices, improve performance and take automatic tape backups rather than backing up to disc or mass storage.

At the same time there will be a new version of the Resource Measurement Facility whose enhancements include exception reporting for such events as disc pack over-use.

Release 2 of System Product is planned for July 1981 and will include upgrades that are the result of requests from the user groups Guide and Share. Also planned are architecture enhancements to 3000 range and global resource serialisation for MVS.

Are you sure what's going on under the D.P. surface?

Sometimes you have a suspicion that things are not as they appear on the surface, but can't put your finger on the reason. With Computer Operations at the hub of your data processing activity, everything that occurs there can reflect significantly on your D.P. unit and even your Company. However, it can be difficult for you to take a detached view and be totally objective about the impression you create.

Dataskil can help. Or perhaps you are in the throes of changing from one mainframe to another. Technical expertise, resources and organisation can come under strain, and users suffer.

Dataskil can help. Or you're awaiting delivery of a new machine. Or trying to solve problems of staffing and procedures.

Dataskil Operations Services can help there too. We can conduct a survey of your operations activity, tailored to your exact needs. We can advise and help on resource control, organisation and staffing levels, salaries and recruitment, define standards, develop procedures, implement projects. And we can provide operations staff at all levels.

Take a fresh look — through our eyes.

Phone or return this coupon with your letterhead to: South & West: Mike Windsor or Jeff Brooke, Dataskil Ltd, Reading Bridge House, Reading, Berkshire (Tel: Reading 0734) 681288. Midlands & North: Laurence Hobday, Dataskil Ltd, St. Anne House, Alderley Rd., Wilmslow, Cheshire (Tel: Wilmslow 0925) 632883.

Please arrange an initial discussion without commitment. Please send your brochure. Please arrange a free one day operations appraisal.

IN this miniature version of the 16 Fuzilla, the problem is to get the numbered blocks into a circular sequential mode in only 16 moves, with the figure running in clockwise or counter-clockwise around a blank central square.

A "move" must consist of sliding one block into which ever square happens to be vacant at the time. Lifting a block out of the frame before replacing it is not allowed. See page 87 for solution.

PEOPLE and EVENTS

We are the Champions

THE ICL Information Processing Team (above) admire the trophies they won in the Business Equipment Trade Association 7th annual golf tournament, played over 36 holes at Foxhills Golf and Country Club, Otterhaw, Surrey.

The tournament was entered by teams from, among others, Facit-Addo, IBM MDS, Nexos, NCR, Honeywell, and Univac.

Pactel MD appointed to Monopolies body

PACTEL's managing director, Holman Hunt, has been appointed to the Monopolies and Mergers Commission.

Hunt has been in the computer industry since 1957, most of the time with P.A. In the 1960s he built up P.A.'s computer business, and in 1970 joined the board of P.A. Management Consultants, where he was responsible for directing a group of divisions operating in the computer field.

On the formation of Pactel, PA Computers and Telecommunications, in 1976 he became its managing director. He has also been president of the Institute of Management Consultants.

The Monopolies and Mergers Commission exists to advise the Secretary of State for Trade on possible monopolies and on whether they, and planned mergers, are against the public interest. It also advises on situations which may be anti-competitive, and on possible abuse of "positive planned monopoly situations".

Tony Higgins leaves CW

Tony Higgins, acting editor of Computer Weekly, is leaving to join Marconi International Fellowships, Aspen Institute of Human Studies, 1229 University Ave, Boulder, Colorado 80302, US.

Nominate a Marconi Fellow

NOMINATIONS are invited for the Marconi International Fellowship, a £25,000 prize to be made next year to a person who has made a significant contribution to the development of technology or its application to the lives of the community.

This is interpreted broadly to include computer-aided medicine, medical diagnosis and technology, overcoming handicaps.

Previous winners of the award have been in India, Japan, the UK and the US.

Nominations should be sent to: Marconi International Fellowships, Aspen Institute of Human Studies, 1229 University Ave, Boulder, Colorado 80302, US.

Alan Senior, until now managing director of Higgins & Senior, has joined Higgins & Senior as managing director of the company's UK division.

Tony Kaminski, former technical manager of Systems and national and Computer Week assistant display advertisement manager, has joined Capgem Financial, the IBM business broking house, where he is responsible for peripheral sales and the Defence Military sales unit. He used to be in charge of the Elliott 803 for business calculations.

Betty Prince, until lately international memory product marketing manager with Motorola in Austin, Texas, is moving to East Kilbride, Scotland where her title will be memory product marketing manager.

Philip Brown has joined the NCC to handle the Cobol aspects of the Standards in Computing programme. Previously, he spent nine years in software engineering at Burroughs, and he has lately been chairman of the ECMA technical committee on database, and a member of ECMA, Codasyl, BSI and ISO Cobol committees.

Nat Wolff has joined X-Data as controller, spare parts and services. His last job was as repairs controller with DRI.

MICRO NEWS

STILL no decision has been reached on the future of Inmos, the NEB-backed UK microelectronics company. The National Enterprise Board is currently reviewing the company (for the third time) in the hope that the Tory government will grant the second £25 million promised by the previous Labour government.

If it does, Inmos in the UK will have a future as the sole UK manufacturer of standard microelectronics components.

Before any decision is made, however, Sir Keith Joseph, Secretary of State for Industry must answer the question he posed at the last Inmos debate. Does the UK need to produce its own standard integrated circuits, or can it rely on foreign companies setting up here?

Inmos's answer to this is that this country does need its own standard LSI manufacturing facility, and its own research and development in that area, in order to keep at the front edge of the technology. According to Ian Barron, the UK director, Intel believes represents between £1 and £2 billion in the UK over the next five years.

According to Tom Lawrence, vice president for Europe, hardware and software technology is already increasing in sophistication faster than it can be used. Engineers in the UK should be taking advantage of this and exploiting the applications area.

In the microprocessor development business Intel stresses that the development of a basic CPU alone takes an average of 12 man months. The input/output communication takes another 80 man months, the operating system development another 120 man months, and applications languages like Pascal and Cobol another 1,200 man months.

To become competitive in the microprocessor business Inmos has to put in a similar amount of effort. This leads to a second question, that Sir Keith Joseph is probably trying to answer. What chance does Inmos have of succeeding in its aim?

Paul Schroeder, design director, originally felt that Inmos was in a position to pull off the same trick with its memory products, the 64K dynamic RAM and 16K static RAM, that Mostek pulled off with the well-timed introduction of its 16K dynamic RAM (CW, November 6, 1978), now an industry standard.

When working for Mostek, Schroeder designed a 16K dynamic RAM that was better suited to industry requirements than others already on the market.

Does UK really need Inmos?

grated circuits, but should rely on other companies, including itself, to supply them. In fact engineers in this country should be concentrating on utilising them and designing applications.

Intel sees the microelectronic and computer markets in a single triangular-shaped spectrum (see Figure 1) with increasing performance moving up the triangle. At the lower performance end are discrete devices and VLSI devices, while at the top are mainframes, midsize and minicomputers, leaving a gap in the centre of the triangle. This gap, the "applications gap", Intel believes represents between £1 and £2 billion in the UK over the next five years.

According to Tom Lawrence, vice president for Europe, hardware and software technology is already increasing in sophistication faster than it can be used. Engineers in the UK should be taking advantage of this and exploiting the applications area.

In the microprocessor development business Intel stresses that the development of a basic CPU alone takes an average of 12 man months. The input/output communication takes another 80 man months, the operating system development another 120 man months, and applications languages like Pascal and Cobol another 1,200 man months.

To become competitive in the microprocessor business Inmos has to put in a similar amount of effort. This leads to a second question, that Sir Keith Joseph is probably trying to answer. What chance does Inmos have of succeeding in its aim?

Paul Schroeder, design director, originally felt that Inmos was in a position to pull off the same trick with its memory products, the 64K dynamic RAM and 16K static RAM, that Mostek pulled off with the well-timed introduction of its 16K dynamic RAM (CW, November 6, 1978), now an industry standard.

When working for Mostek, Schroeder designed a 16K dynamic RAM that was better suited to industry requirements than others already on the market.

ket, including Intel's. Mostek released it just as Intel's sales started to rise and consequently took over the market.

If Inmos had been allowed to keep to its schedules this would still be the case. Now, the seven-month delay could jeopardise the whole plan.

Inmos' 16K static RAM, called the IMS 1400, is due to be sampled at the end of the year, while Intel's 2187 is to be sampled this quarter, ready for volume production in the first quarter of next year. Mostek has already sampled its 4184 (CW, July 10).

Other competitors include Texas Instruments and Motorola who plan to be in volume production by the end of the year and early next year, respectively. Motorola will sample its 2K by 8-bit 4018 in Europe in November, and its 16K by 1-bit 2187 early next year.

Fairchild's 2K by 8-bit device will be available in sample form in the last quarter of this year and should be in volume production by the second quarter of next. Meanwhile, at least three Japanese companies will be participating in the 16K static RAM market: Hitachi, Toshiba and Mitsubishi.

On the 64K dynamic RAM scene, Inmos has almost lost its chance. Motorola has already shipped in volume to its European distributors, and Texas Instruments has just released samples in the UK, hoping to be in volume production next year. Hitachi produced samples in April this year.

Mostek is due to start releasing samples next month and expects to be in volume production by the end of the year, while Fairchild hopes to be in volume production early next

DEK Printing Machines' 1202RS modular system prints onto thick film circuit, liquid crystal displays and microelectronic components up to 102 by 102 millimetres at a resolution of more than 2.28 microns. At a cost of £8,470, the basic model for laboratory work has to be loaded by hand and will print 180 substrates per hour. A fully automatic version, which costs around £10,000, will print 1,200 substrates per hour.

year, National Semiconductor and Intel do not expect to have samples until next year. NEC, Toshiba and Fujitsu will also be competing.

The longer Inmos is delayed and prevented from mass producing its memory products, the less are its chances of succeeding.

Finally, a CPU that minds its own business.

Announcing the HP 1000 L-Series computer. Separate I/O processors let the CPU concentrate on computation.

Our new HP 1000 L-Series is designed to give you outstanding processing performance—even in the most demanding applications.

The reason is our innovative distributed intelligence architecture. Each I/O interface has its own processor—made with our exclusive SOS LSI process—and its own direct memory channel. Which means that each interface can control and monitor data transfers without interrupting the central processor.

So the CPU can concentrate on its main job of computation.

And you get faster response, higher throughput and superior system performance.

But what's really surprising about the L-Series is that you get all this performance at such low prices. For example, an OEM quantity of 50, the unit cost of our L-Series is as little as £1,136—while a complete database system* would be only £29,900 in the same quantities.

Nobody makes processors like we do.

The key to the HP 1000 L-Series' impressive new architecture is our own Silicon-On-Sapphire technology. SOS lets us make CPU and I/O chips with extremely high circuit density, low power consumption, and high processing speeds—at a very low cost.

It's this combination of high performance and low cost that makes the L-Series appropriate for the whole range of OEM and industrial applications—including data management, process control and instrumentation.

And to ensure you can get the exact configuration you need for your specific application, the L-Series is available in a wide choice of board, box and system packages.

The HP 1000 L-Series is a fully compatible member of our high performance HP 1000 family.

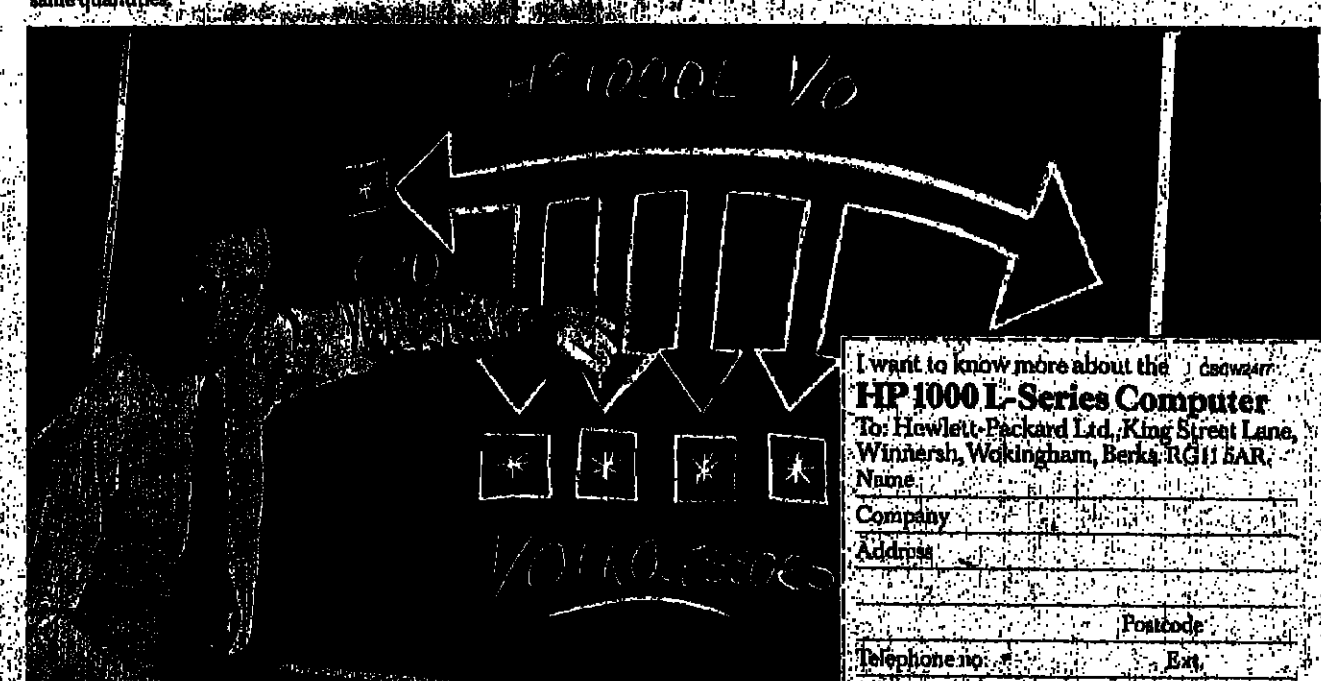

And like all our computers, the L-Series is backed by the full range of HP support and documentation services—including our worldwide service network.

For more information on the low cost, high performance HP 1000 L-Series, fill in the coupon or call Hewlett-Packard Ltd., King Street Lane, Wokingham, Berks, RG11 5AR. Tel: Wokingham (0734) 784774.

*Our starter kit comprises a CPU, 64KB memory and one I/O board. The disk-based system includes a 1.2 MB floppy disk drive, up to 12 MB Winchester disk drive and an HP 1000 L-Series keyboard. The price, correct at time of going to press, are OEM prices in quantities of 50.

OBITUARY

Peter Haines

PETER HAINES, director of Software Sciences International, has died at the age of 57.

Haines became involved with computer systems in 1954 when he worked on the design and implementation of the Apollo ATC system for the Oceanic area. In 1959 he joined the aerospace consultancy General Precision Systems, and became managing director in 1970.

In 1971 the company merged with Software Sciences and he took the position of marketing director which he held until his death.

Philip Brown has joined the NCC to handle the Cobol aspects of the Standards in Computing programme. Previously, he spent nine years in software engineering at Burroughs, and he has lately been chairman of the ECMA technical committee on database, and a member of ECMA, Codasyl, BSI and ISO Cobol committees.

Nat Wolff has joined X-Data as controller, spare parts and services. His last job was as repairs controller with DRI.

● Systems Programmer to £9.5K + car Pre & Post Sales Support to £9.5K + car

A computer manufacturer in Herts wishes to recruit the above
personnel. The systems programmer should be used to rapid
problem determination and solution. For both positions an IBM
and/or mini background with comm's experience would be ideal.
U.K. and possibly European travel will be part of your duties.
Mike Mead or Anne Powell.

● Software Manager — Sussex — to £11K

A leading supplier of mini systems, based in Sussex is looking for
a software manager with a sound knowledge of real-time system
concepts. You will be responsible for the profitable implementa-
tion of contracts, meeting technical cost and time targets and be
expected to advise on system solutions. A team of some 8 people
will be reporting to you, therefore previous project manager
experience is required together with administrative ability.
Mike Mead.

● Production Control Unit Manager — Reading — to £12K

Applicants should be able to work independently and have
extensive experience of computerised production systems with
more than one machine including minis. Analysis and design
experience would be a distinct advantage as would knowledge of
stock control, materials planning, logistics.
Brian Harris.

● RPGII Analyst Programmers up to £10,000 — St Albans

A medium size consultancy specialising in marketing RPGII
application packages and providing consultancy services on IBM
GSD equipment, needs a number of experienced analyst pro-
grammers to work on projects both in-house and on-site. Appli-
cants should have a knowledge of IBM hardware preferably S.34.
Brian Harris.

● Information Analyst — Middlesex — CE10K

This an excellent opportunity for candidates well versed in
systems analysis and design who are interested in the technical
aspects of systems software and wish to move into a junior
management role. Candidates would be involved in developing a
centralised control function for all data, in a busy, technological
advanced data centre.
Karen Rizzello.

London/Paris — Project Leader — £10K

A major international trading and shipping company are seeking
someone with experience in systems analysis who will ideally
have worked with on-line minis using a FORTRAN type language
and DB techniques to develop a shipping crew system. Future
prospects are excellent.
Karen Rizzello.

To apply for any of these positions, please telephone Brian Harris or Karen Rizzello on 01-242 9356.

Senior Analyst/ Programmer c £8500

Career Opportunity in the Northfordshire Countryside

We are responsible for the UK manufacture of Glaxo Pharmaceuticals and
their sale in this country.

The Company is engaged in the implementation of a large network of linked
Packed minicomputers (involving all Company locations) and based around a
large central JCL mainframe. There is a major development programme of
developing on-line systems being built around a distributed database pro-
cessing in the production planning and inventory control area.

An opportunity has arisen for a Senior Analyst/Programmer to be based at our
main factory, which in addition to all the above has a SACS minicomputer.
Candidates should have 3 to 5 years experience. This senior position will
be given to applicants with less experience in anticipation of a more junior
position becoming available in the near future.

Major Company benefits include participation in profit sharing, pension
scheme, medical insurance, membership of an active sports and social club.
Please apply for an application form to: Mrs. N. M. Moore, Senior Personnel
Officer, Glaxo Operations UK Limited, Priory Street, Warr, Cheshire, WA1 2 6D,
quoting reference number: 120/271100.

The Polytechnic
of North London

PROGRAMMER ANALYST

D.P. on Microcomputers

The Polytechnic of North London is a leading
centre for learning and research in
computer based systems covering
all aspects of computing.

We are looking for a programmer-
analyst who can carry out a wide
range of systems analysis and design
work. The successful candidate will
be responsible for the design and
development of microcomputer
systems. The successful candidate will
also be responsible for the design
and development of microcomputer
systems. The successful candidate will
also be responsible for the design
and development of microcomputer
systems.

For further details and an application form please
contact (quoting ref. V70/301)
The Recruitment Officer
Oxford Regional Health Authority
Old Road, Headington
Oxford OX3 7LJ
Closing date: 1.8.80

BE PART OF THE BANKING SYSTEM OF

One of the UK's BIG CHALLENGING BANKS

Latest Techniques

— Work on the latest Hardware and Software on a Large System,
involving BATCH, T.P. AND THE LATEST DATA CAPTURE
METHODS.

Training

— A wide range of Technical and Management training available.

Complete Job Interest

— Challenge of Pioneering Stages of Large Brand New Develop-
ment.

True Career Structure

— Many Promotion channels. Prospects within Technical Field,
Technical Management.

Salary

Junior Systems Analysts and Programmers: Negotiable up to £7,000 on a scale
expected to top £8,000 on review (1 July, 1980).
Systems Analysts and Senior Programmers: Negotiable up to £8,500 on a scale
expected to top £10,000 on review (1 July, 1980).

Experience Required

- Minimum 18 months' experience in a Commercial Data Processing environment. Working on Systems Development as a Programmer, Programmer/Analyst or Systems Analyst. A Banking or Financial Systems background is considered to be advantageous.
- Programming experience with any of the following would be advantageous:
ICL 2960, 2972 — VME/B & T.P.M.S. 200 — COBOL & SCL
ICL System 4/70 — J, MULTIJOB — COBOL & USERCODE
PDP 11/70 — RSX 11M — MACRO II —
FERRANTI ARGUS 700 — CORAL.
- Systems Analysis experience with any of the following would be advantageous:
ICL 2900 — VME/B TPMS 200, DDS 400.
On-Line Systems Design including
Interactive Dialogue Design,
Disc File Organisation and Design,
Data Entry and Enquiry Systems,
Data Communications and Network Design,
Large System Sizing.

Working environment is modern, comfortable and efficient. Most work
to be carried out in Bootle with some opportunities for travel.
Relocation will be paid.

SENIOR ANALYST PROGRAMMERS

Would you welcome the challenge of setting up and running your own mini based department? If so, the following position will interest you.

Computer Manager

BLACKBURN LANCASHIRE
to £9000 plus car

The Computer Manager reports to the Assistant Managing Director of a local organisation which is part of a substantial group operating throughout the UK.

The Manager will take responsibility for a new mini computer which is to be installed to handle the accounting and management information requirements. Initially standard systems will be used, but new applications will be developed in the future. In addition, the person appointed will be responsible for the operation of computer controlled production systems in the specialised areas of the client's work. The Manager will draw on various support services within the group initially and will recruit a small team of computer specialists later.

Candidates, ideally graduate calibre, will have a strong commercial background with experience of COBOL; real time mini systems; analysis; design implementation and project management.

There are excellent prospects within the group and full training on new systems and technology will be given. A good relocation package is offered.

To apply for this position please ring Neville John on Nantwich (0270) 627206 or write to him at the address given above.

NEW YORK

Specialist Computer Recruitment Ltd.

Founded in 1967 and of European origin, we have grown to be a truly International Computer Manufacturer who intend to remain in private hands.

Our products are the result of exploiting new techniques and on occasions have created computer systems that have proved to be well ahead of the general development in the region of medium sized computers.

Aiming successfully at the "fast tailored" solution we are looking for people who can respond to detailed technical requirements.

Candidates should be able to sell the more complex systems to demanding people and should have an understanding of Government decision making processes and ability to deal effectively with proposals.

IN RETURN apart from substantial salary we offer you a genuine opportunity to grow with our Company, to contribute to its future success and enjoy the creative atmosphere of a committed team of professionals.

**Computer Professionals who may not be in sales but who have extraordinary talents are welcome to apply for other positions within the Company.*

For an immediate and confidential interview, where full information on the Company will be supplied, please contact our Advising Consultants:
SIMON LEVER on 01-936 0671 (24 hour answering service)
or 021-420 1674 (evenings and weekends)

For the Northern area, contact PAUL PEARCE on 021-236 3781 (24 hour answering service)
or 021-308 4908 (evenings and weekends)

If you prefer, please write, giving full details, to the relevant consultant.
Your application will be treated in the strictest confidence.

JBA

Systems Software Specialist

Midlands

c. £9,500

An opportunity exists for a specialist to provide technical support at the systems software level in the development of a new range of distributed systems. The client is an international organisation and has a reputation for being in the forefront of computing technology. Applicants should have a strong IBM mainframe systems programming background. Familiarity with any of: MVS, DOS, CICS, IMS and DL/I is particularly relevant.

Manufacturing Systems Specialist

North West

c. £8,000

A major division of a large engineering organisation is seeking a Systems Specialist with the potential for management. His initial responsibilities will involve definition and implementation of manufacturing and administrative systems possibly using IBM's COPICS package.

Applicants aged 28-35 should have a good education and a sound computing background involving systems design and development within the engineering industry. This is an excellent opportunity for an aspiring professional to achieve management status in a dynamic environment.

Analyst/Programmer

West Midlands

£7,500

Our client, is an acknowledged leader in its field and produces a wide range of high and low technology products. The Systems Development team now has a vacancy for an Analyst/Programmer to assist in the development of a range of systems involving on-line, real time and database techniques. Applicants, with at least 2 years computing experience should be proficient with COBOL. Familiarity with a Univac 1100 environment - notably TIP and DMS1100 would be advantageous.

To apply for the above positions or for further information please contact BEV STEVENS.

JAMES BAKER ASSOCIATES, International Personnel Consultants,
Gateway House, 50 High Street, Birmingham B4 7SY. Tel: 021-643 7865.

(2093)

APL Specialist

Warwickshire

Neg. to £8,000

A multi-national engineering company requires an APL Specialist to provide technical support in the use of APL. Involvement in the development of software, designed to analyse and produce forecasts from corporate data will also be required. Applicants should have a good computing background and the programming level and be thoroughly competent with APL on IBM mainframes. An unusual job with a real technical challenge.

Programmers

Nottingham

c. £5,300

A large and diverse organisation has opportunities for PROGRAMMERS with varying levels of experience to develop a variety of commercial applications. Applicants should have a good education and at least 2 years programming experience using COBOL, PL/I or Assembler in an IBM 370 installation.

HP 3000 Programming Opportunities

Gloucester

£6,000 - £8,000

A number of positions are available for programmers with from 1 to 4 years COBOL experience to join our client's new team, developing and redesigning their manufacturing and reporting systems on a new HP 3000. Applicants for senior positions, i.e. 3 years +, are expected to possess on-line systems experience and be fluent and effective in spec. writing. A knowledge of structured programming would be a marked advantage and candidates should have good management potential. A relocation package is available for those wishing to move to this beautiful part of the country, plus all the normal large company benefits.

Analyst/Programmers £6-£9,000

Put the sparkle back into your career

Since its formation in 1964, Computer Management Group has grown to become one of the largest independent Computer Services organisations in Western Europe. This is because at CMG the accent has always been on 'total customer service' and on generally rewarding achievement. The Company has long been recognised as one of the industry's highest payers and offers considerable scope for a challenging career in all aspects of Data Processing.

Our services involve not only Consultancy and Software, but also purpose-built package systems that can be operated either on our clients' own computers or on CMG's.

Several CMG Companies are offering outstanding opportunities to young Programmers and Analysts. The work is stimulating, involves many different types of computers and languages and offers opportunities of working on many different types of financial systems.

Ideally, you will be aged 21-25 and have 2-3 years experience in a user oriented environment. Just as important, you should be a good technician capable of enhancing the Company's excellent reputation.

All promotions are made from within the Company and these positions carry equal management potential. We offer excellent starting salaries which are commensurate with experience and ability PLUS the following benefits:

- * 21-28 days holiday
- * Non-contributory pension
- * Free BUPA
- * Relocation assistance
- * Profit sharing
- * Share purchase scheme
- * Non-contributory life assurance

If you'd like to find out more about what makes CMG so special, please send the coupon below to any of the following CMG Companies:

SENIOR PROGRAMMER FOR GRAPHIC ARTS SYSTEMS

Applications are invited from experienced assembler or machine code programmers to join our team developing original software for a range of word processing and graphic arts mini computer systems. Preference will be given to applicants with experience in any of the following:

Floppy and rigid disc operating systems, real time device handling, text editing, automatic language hyphenation or any related discipline.

MICROPROCESSOR SOFTWARE ENGINEER Z80, Z8000

We need an individual who is capable of both hardware and software design to work on VDU and peripheral device controller applications of micro. Applicants must have a thorough working knowledge of Z80 support chips including floppy disc controllers and some experience of serial transmission (RS 232) protocols is necessary.

This is a rare opportunity to join a technically led company at its commencement to become a key figure in the expansion of its range of products in this uniquely interesting industry.

Telephone (01-561 5425 for an interview or send your cv to: Helgill Ltd., 2 Morland Gardens, Fawcote Ave., Stoke-on-Trent, N.W.10 5DY.

(2095)

Chief Programmer

An opportunity to participate in a major project from its early days. The position is based on an attractive off-shore location situated within the British Isles offering excellent social and educational facilities, easy communications with the U.K. and a wide range of sporting and leisure activities.

The installation was formed in 1974 and our early systems have been received enthusiastically. Although processing volumes are not high, the diversity of applications is unique with a major commitment to database techniques in order to provide the integration of systems required.

Our long-term growth plans require an extremely powerful central processor and appropriate peripherals. In order to support a high level of development and on-line workload, 1981 will see the installation of a Sparc 100/80 configuration with 8470 and 8433 discs, U24 tapes, G.C.S. with 10 communication lines and attendant card and printer devices.

The OS/1100 Operating System is generally regarded among the most powerful and efficient available. In addition, we are planning to use OS/1100 for database development. OS/1100 for our online systems and COBOL 74 as the major programming language for the future development.

The person we are looking for will be responsible for the programming department and will have major involvement in all aspects of getting up to speed for this project. Essential attributes are: supervisory skills, installation using COBOL. Preference will be given to candidates with experience in database processing and database systems and who have used interactive programming aids.

The salary package and pensionable on a non-contributory basis. There is a commitment of 1 year's salary and benefits and a 10% bonus. A 10% bonus on the basis of 10% of the total salary and benefits. A 10% bonus on the basis of 10% of the total salary and benefits.

Applicants should send full name, address, date of birth, qualifications and experience should be submitted together with a recent passport photograph. The salary and benefits will be discussed with the successful candidate. The salary and benefits will be discussed with the successful candidate.

OPPORTUNITIES IN HOLLAND

Go Dutch...for the really good life!

PEOPLE who choose or are sent by their company to live and work abroad, find that their new surroundings take some time getting used to. However, the Dutch are used to meeting foreigners, and most of them know one or more foreign languages, especially English.

The influx of overseas business to Holland has brought many people from abroad to live there. By and large they have settled down quite happily, and much has been done to make them and their families feel at home.

It is worth looking into the background of the country so as to be a little wiser before going into those lucrative jobs. Holland, otherwise known as the Netherlands, is a small country, but with a population of over 14 million. The population density is the highest in the world. About 8,500,000 people live in Randstad Holland — the western part of the country, where three main cities are situated: Amsterdam, the capital, a seaport and international financial centre; Rotterdam, the largest port in the world (Europe and Masvlakte); and The Hague, the seat of the government and the International Court. The Randstad also takes in Hilversum, Haarlem, Leyden, Delft, Gouda and Utrecht, forming one vast tract of urban concentration.

One of the most important aspects of the world is the Dutch language. The language is Dutch but English is widely used. Other aspects to consider are, for example, the health facilities in Holland, which are first class. Education is available in private English speaking schools. Taxation is a separate

be worker in Holland from Britain is that it is part of the EEC, so there is no difficulty with work or residency permits.

The economy since the end of the Second World War has been characterised by more or less continuous expansion. In the period 1958-1971 alone, real national income doubled. Economic policy aims to produce goods in such volume and of such quality that exports, with revenue from service industries and capital transactions, can balance imports.

The main industries are metal manufacturing, electrical, electronic, mechanical and aeronautical engineering, non-ferrous metals, food, drink, tobacco, oil and chemicals. Data processing personnel can therefore find themselves engaged on just as wide-ranging applications, including production control, order entry, financial and general commercial projects.

In addition, these industries are by and large located

by Val Halliwell

IT'S a good life in Holland — and it can be really good, says Val Halliwell, managing director of Victoria Appointments, the Manchester-based computer personnel recruitment company.

Holland, says Miss Halliwell, has the rich chandeliered tradition of the country's 17th Century Golden Age, side by side with buildings to rival the best in modern architecture and facilities, displaying wealth, prosperity and progress at every turn.

Dutch DP installations work to high standards, and she reports that working environments are thoughtfully designed, affording a pleasant working atmosphere.

dominated by IBM, which has a considerable share of the installations.

As in Britain, there is a shortage of skilled DP professionals, the present emphasis being on programmers with fairly general and varied backgrounds, followed by operators.

The DP industry is well represented with software houses, bureaux and manufacturers all vying for business. In addition to a wide range of users, there are many programmers who expect to be engaged on anything from clearing up backlogs of work caused by staff shortages, conversions to new machines, to development of new software for manufacturers, all of which requires a high level of competence, responsibility and reliability for which British DP technicians are recognised as among the best in the world.

A number of conversions to new ranges now in the pipeline will undoubtedly create great opportunities over the next year or so, in the area of data processing, communications, and growing trend towards distributed processing systems, mainframes and minis.

As a general guide, the difference between the market and the UK is that Holland is about six months behind on delivery, so one can look forward to changes in August/September. This is expected to manifest itself by increasing the demand for systems programmers, software programmers, and operators both on a permanent and a temporary basis. Already we are seeing advertisements in the Press offering such payments on permanent temporary (1-2-3-4) basis, with full fringe benefits (eg, subsidised housing, medical insurance).

On the whole, installations in Holland work to a very high level of standards and documentation and, in general, DP disciplines are high. Working environments are thoughtfully designed, affording a pleasant working atmosphere.

All in all, it's a good life in Holland, and it can be really good.

It has the rich chandeliered tradition of Holland's 17th Century Golden Age, side by side with buildings to rival the best in modern architecture and facilities, displaying wealth, prosperity and progress at every turn.

Career opportunities in Holland

BSO/Automation Technology, a major Dutch software house is looking for professionals with a background in technical, scientific or systems software or hardware to join a growing specialist

group. We are looking for people seeking a long-term career in a software and systems house environment rather than a short stay abroad. We need

Systems designers
to £ 18k
plus car and expenses

Experience in the design of real-time or control systems based on mini or micro computers. 5 years experience in Automation and a BSc or equivalent are minimum requirements. Knowledge of Assembler is essential. Experience with any of PDP 11, DG Nova or Philips 800 an advantage.

Analysts
to £ 15k
plus car and expenses

Experience in the development and installation of real-time or control systems based on mini or micro computers. Ability to talk to hardware engineers is important. 3 years experience in Automation and a BSc or equivalent, preferably in computer science or electronics, are minimum requirements. Experience of PDP 11, DG Nova or Philips 800 would be an advantage. Knowledge of Fortran or Basic and Assembler is necessary.

Programmers
to £ 13k
plus car and expenses

Experience in programming real-time and control systems in Assembler for mini or micro computers. Good design and construction are vital. A minimum of 2 years experience and a BSc are required as is programming experience in Assembler. Experience of PDP 11, DG Nova, Philips 800 or Intel 8080 would be an advantage.

Microprocessor development engineer
to £ 15k
plus car and expenses

Experience in the development of microprocessor based industrial products or systems with good knowledge of hardware or interfacing problems. 5 years in computing or electronics, ideally with Intel 8080/8085 or Zilog 80 experience. Knowledge of Assembler and at least one high level language is necessary.

The company offers tax free expenses, assistance with medical insurance and a company car covering private use at no cost to the employee. A relocation allowance up to £ 1500 depending on family status plus transportation to Holland will be provided. Other excellent fringe benefits and almost 5 weeks' vacation. Career opportunities to consultant or project management level are available in a growing company. The company is currently busy on a number of different projects using various hardware, including micro.

Applicants to these unique opportunities are requested to send their detailed resume, preferably with photograph, to BSO/Automation Technology. Interviews are scheduled to be held in the U.K. during August 1980.

OPPORTUNITIES IN HOLLAND

OVERSEAS VIA I.A.

Industrial Artists has more challenging and rewarding staff positions on offer. Below are a selection of our most urgent requirements:

ANALYST PROGRAMMERS with at least three years experience of COBOL on IBM 370, 4300 and 303X Series machines running under OS/VS1, MVS, DOS/VS and DOS/VSE are required to work at a number of client installations. Good commercial applications experience will be looked for. Various locations in The Netherlands.

IBM 370-303X COBOL PROGRAMMER with a minimum of four years experience. Must be able to program UTILISING DL1 FACILITIES. The work involves participation in the design and writing of major new systems. Location: The Netherlands.

4 ICL SYSTEM 10 ASSEMBLER PROGRAMMERS are required to work at client premises in Germany. A good knowledge of commercial applications will be looked for. Training will be given in the use of "STELLA". German language not essential, but advantageous.

UNIVAC 90 SERIES COBOL PROGRAMMERS are required, with a good knowledge of commercial systems to work on client premises. Location: The Netherlands.

SIEMENS BS2000 SERIES SYSTEMS and APPLICATIONS PROGRAMMERS are required to work on conversions at various sites in Benelux countries.

ICL 2900 and 1900 PLAN PROGRAMMERS are required for large systems development and optimization of existing systems. Knowledge of STANDARD ICL UTILITIES is essential. Location: The Netherlands.

IBM SYSTEM 34 ANALYST PROGRAMMERS with RPG II are required at a number of different sites in The Netherlands.

TEXAS TI 990 PROGRAMMER with a good knowledge of COBOL and ASSEMBLER. Location: The Netherlands.

PDP 11 RTL2 CONSULTANT PROGRAMMER to work in a PROCESS CONTROL environment. Work involves water purification and pumping stations. Knowledge of German advantageous, but not essential. Location: The Netherlands and Switzerland.

45 IDMS/COBOL PROGRAMMERS to work on ICL 2900 Series hardware are required to provide 'in house' team support on the development of new systems, plus maintenance of existing systems. Applications will include Payroll, Stock Control and Financial Ledgers. Location: Abu Dhabi. An exceptional benefits package is provided including accommodation, etc.

SYSTEMS PROGRAMMER required to implement a DL1 database, also to create and develop systems software. Hardware IBM 4300 Series; operating system DOS/VSE. Location: The Netherlands.

SYSTEMS PROGRAMMER required to join our client's own permanent staff. Initial task will be to interface DATA 100 and SYCOR terminals to an IBM mainframe. Knowledge of Dutch language essential. Location: The Netherlands.

UNIVAC V77 COBOL PROGRAMMERS with a knowledge of VORTEX package are required to work on a variety of commercial applications. Location: The Netherlands.

UNIVAC 1100 SYSTEMS PROGRAMMER required with a good knowledge of 1100 Series operating systems.

Excellent salaries are on offer, including generous concessions already negotiated with the Dutch taxation authority, four weeks' paid holiday per annum, paid national holidays and certified sick time, a holiday bonus, plus the full support of the administrative staffs based in our Dutch offices.

Do you fit QUADRANT'S Dutch REQUIREMENTS?

ANALYSTS & PROGRAMMERS

SALARIES up to £9000

+ GENEROUS OVERSEAS EXPENSES

UK SECURITY AND OVERSEAS VARIETY

Quadrant currently requires up to 10 professionals to work through its subsidiary company Quarto Software bv in The Hague. Typical assignments last up to six months with subsequent opportunities to transfer to the Dutch payroll.

If you can offer:-

- 3 or more years solid experience
- An outgoing, confident personality
- High professional standards and a proven track record
- Further plus points would be:-
- A knowledge of IBM CICS, Structural Programming etc.
- Knowledge of Dutch or German to C level standard

We can offer:-

- Excellent salaries
- Six monthly personal reviews
- Pension Scheme
- Generous expenses
- Job variety
- Career Progression

If you feel up to the challenge please call Tom Roe on 061-928 8302 or write to him at the address below giving details of your career to date.

Quadrant Computer Services Ltd.

Ashtley House, Ashtley Road, Althorpe, W.A.14 2DB

Handwritten note: 10/11/80

Sales and Marketing Professionals

Modular Computer Services is a European leader in the supply of computer systems to the communications and industrial marketplaces.

We are a young dynamic company with a rapidly expanding marketing and sales organisation and as part of this expansion we are looking for Technical Marketing Analysts and Sales Engineers to join our existing teams in Wokingham and Coventry.

Technical Marketing Analysts c £11,000 + Company Car

Suitable candidates will have a technical background on minis and will probably have held senior positions in projects implementing real time systems in industrial or communications applications. The right people will be enthusiastic committed individuals capable of providing our sales force with comprehensive support. This role may suit software specialists with both assembler experience and proficiency in a high level technical language who are looking for the challenge of a demanding pre-sales environment.

Sales Engineers c £16,000 + Company Car

We are looking for Sales Engineers with a proven background of successful selling within a minicomputer environment. They will preferably have a knowledge of communications or process control markets and the kind of drive and determination that will enable them to achieve commission of £6-£8k above targets met. We expect to attract aggressive individuals capable of making a significant contribution to a sales organisation and who are looking to take on increased responsibilities in the future.

Company benefits are excellent and include a non-contributory pension scheme, free Life Assurance and free BUPA.

For further information ring Sue Burden on Wokingham 788711 or write to Modcomp, Molly Millars Lane, Wokingham, Berks.

MODCOMP

IBM EXPERIENCE

MIDLANDS £7,000-£9,500 PLUS

Our client, a long established Midlands consultancy wish to recruit further professional staff at all levels.

The opportunities merit strong consideration, as the organisation can offer a real career challenge, allowing individuals scope and variety. The company is of long standing, stable and carefully managed. They are embarking on a well planned expansion, particularly on the B100 and 4300 ranges and so seek additional staff with IBM experience.

The various roles include programming, principally in PL/I and COBOL, systems design, project management and consultancy, working with experienced colleagues, and provide opportunities for personal advancement.

Experience of CICS, PL/I, IMS, QMS or QJCL would be of particular interest, but is not essential.

The company has a friendly personal approach to clients and staff alike, and has generated an active social life. Benefits such as a monthly salary review and bonus, pension and sickness schemes, 5 weeks holiday, motor allowance and expenses are attractive.

If you can offer IBM experience, and would like a confidential discussion, contact Mike Heslop ref CW 280.

SEN

Specialist Computer Recruitment Ltd

We are a highly successful Group of Companies, creating, manufacturing and marketing CAD/CAM systems. Our record to date is impressive, our product range innovative and expanding and our export achievements outstanding. (70% of our products are exported). Expansion, in the U.K. and world markets has opened up a number of opportunities for people with relevant experience and commitment to join a stable, though dynamic Company whose products are exciting, well accepted and strongly supported.

Sales Engineers

At least 2 years sales experience, a competent knowledge of CAD/CAM and the ability to identify applications is essential. Your negotiation skills should be well developed as must your ability to deal with people at all levels, understanding the effect of computerisation upon their companies and departments. For the EUROPEAN position fluency in French or German would be preferable. The earnings potential is good, as is the prospect of advancement.

Marketing Positions

To enhance our penetration we wish to identify market support and market research people. The SUPPORT position offers the chosen applicant the opportunity to carry out a pure marketing role from the product inception through to launch. We are introducing a new product in 1981 and such a person is of vital importance. Knowledge of CAD/CAM would be advantageous as would knowledge of the electronics industry. The MARKET RESEARCH opportunity is open to people who have recently graduated and have a strong electronics or technical background where they will be responsible for collating information prior to dissemination. The successful applicants will be working with a number of people within the sales division and so it is imperative that they have the ability to communicate effectively in a fast moving and challenging environment.

All the positions offer genuine opportunities for advancement within the Company's diverse structure.

For an immediate and confidential interview contact our Advising Consultant, Simon Lever, On01-935 0671 (24 hour answering service) Or 021-420 1574 (evenings and weekends) Your application will be treated in total confidence. If you wish please write to me.

SELECT A DIFFERENT OPPORTUNITY . . . IN COMPUTER RECRUITMENT . . . and earn £7,000 - £12,000+

Recruitment consultancy provides a high degree of interest and allows you to build upon the knowledge of the computer industry gathered in your career to date.

You meet many different people - client management in both the D.P. and personnel areas, often with serious and long standing staff shortages.

Applicants seeking a new position, but often worried and confused by the choices open in a widely differing range of companies - manufacturers, bureaux, software houses, users with a wide variety of machines and software.

As you gain knowledge both through training and experience you become the consultant able to help. You understand the market and learn about the attraction and selection of applicants. Your skills will be in making a suitable match which satisfies applicants and clients.

In joining Capp Associates you come to a market leader in the recruitment industry with a reputation and customer base widely respected by both our clients and our competitors. You will work closely with our Directors in expanding and consolidating our client list and you will be well rewarded for your efforts.

Naturally we expect effort and results. Our recruitment consultants work hard and are expected to provide a high level of service. They need to be the right sort of people with the will to succeed.

We are willing to invest in you if we consider you can do the job - all you have to do is invest a little effort to discover whether this is the time for you to change into recruitment consultancy.

**TARGA COMPUTER
SERVICES**46/47 LONDON WALL
LONDON EC2M 5TE 01-638 6381

Since 1957, Texas Instruments has brought high technology from Bedford to the world. Here we have also developed forward-looking personnel policies later taken up by companies throughout the UK. At Bedford, we can justifiably say, through our people, we make tomorrow's technology happen today.

**Data Communication
Technician**

For a man or woman with a good education, C & G. telecommunications preferred, and 2 years' communications/computer operations experience of similar industry training, the international world of Texas Instruments could add involvement and valuable business experience to your career. Extensive communications experience in H.M. Services would be an acceptable alternative.

Your responsibilities will cover the installation, maintenance and monitoring duties involved in a multi-national data-and-voice communications network.

Typical equipment you will use will include modems, multiplexers, minicomputers, terminals and BPO/PTT circuits.

You will work on a 24 hour, 7 day rotating shift basis, with generous allowances.

For a job that offers involvement in a lively, informal atmosphere, an attractive salary, profit-sharing, free medical plan, relocation assistance, pension and life assurance and active sports/social facilities, contact Beryl Harris NOW on Bedford 67486 or write to her at Texas Instruments Limited, Manton Lane, Bedford.

**TEXAS INSTRUMENTS
LIMITED**

where people and technology meet

is an American based company specialising in the production of computer systems for design applications. These applications cover integrated circuits, printed circuit boards, mapping and mechanical design. We are growing rapidly and have a requirement for a:

SENIOR FIELD ENGINEER

To be located in the Manchester area. Applicants should possess considerable field experience in design applications. Of particular relevance would be semiconductor design, mapping and mechanical design. This position is likely to involve a high degree of responsibility and will also involve a high degree of travel. The successful candidate will ensure opportunity to progress into supervisory roles.

Conditions of employment will reflect the high grade of responsibility and will be very competitive.

Interested applicants should send their CV to: CALMA, c/o The Personnel Group, 10, The Quadrant, Harrogate, North Yorkshire YO1 1PE.

**FIELD MAINTENANCE
ENGINEERS**

Wanted:

To provide service to our Computer Peripheral Division. Applicants should have good GCE background, with experience of electronics and associated areas. Computer experience not essential as training will be given.

Competitive salary, company car, plus all the usual benefits of belonging to a fast growing and progressive company.

Interested?

Job no 11882

Systems Analysts and Junior Programmers

We can offer you some exciting on-line projects and career opportunities

Norwich Winterthur Reinsurance Corporation Limited

Norwich Winterthur Reinsurance Corporation Ltd., is a leading international reinsurance organisation with a very modern and spacious Head Office in Norwich. You will be joining a young and enthusiastic team working in an exciting environment, on the development and implementation of on-line and batch systems using an IBM 3032 under OS/MVS with IMS/DB.

Systems Analysts

Ideally you should have had several years data processing experience, at least two of which have been of Systems Analysts in an insurance, or possibly a financial environment. Also you should have been involved in the successful completion of one major on-line project in an IBM installation.

Junior Programmers

You should have had about a year's experience in using COBOL.

These are permanent positions offering good opportunities for career development. Competitive salaries will be paid commensurate with qualifications and experience. Fringe benefits are first class and include non-contributory pension scheme, staff restaurant and superb sports and social facilities.

Phone John Skipper on Norwich (0603) 693470 who will be pleased to tell you more about these vacancies or write to him at Norwich Winterthur Reinsurance Corporation Ltd., P.O. Box 62, Rose Lane, Norwich NR1 1JY.

NWRe (2152)

SYSTEM ANALYST

Required by the Central Department of an international Research Laboratory, provide Software Support the operation of a large computer system. The candidate must have good academic and professional qualifications, experience of OS 1/2, thorough knowledge of FORTRAN or other high level language, a fluent knowledge of English language. Tax-free salary commensurate with qualifications, plus 20% for non-Italian nationals and other benefits, subject to deductions of 10% for a comprehensive social insurance scheme including pension. Apply within 15 days to this date: Head of Personnel, SACLANT ASW Research Centre, Viale S. Eusebio 400 - 10090 Spedite, Italy.

JBA

Project Manager

Norway
From £15,000, + Free Accom. + Car
We have been retained by one of the most innovative electronics companies in the communications field, to recruit a highly skilled professional to lead the development of an advanced micro controlled switching project. Candidates should have considerable experience using micro, real-time and communications software techniques. The ability to manage a large technical team and co-ordinate the various activities of a sophisticated project is essential.

Contact: Brian Postles

District Systems Manager

London/North Herts. c. £11,000 + Car
An International Telecommunications group are currently seeking an experienced computer professional to lead the technical support team responsible for all pre and post sales activities.

A background in commercial systems design, COBOL programming and exposure to communications networks, together with good man-management experience plus the ability to liaise with technical personnel at all levels is a pre-requisite. Knowledge of ASSEMBLER and distributed data processing would be a definite advantage. This is an interesting and challenging opportunity to contribute to the development of this rapidly expanding organisation, utilising the latest technology.

Contact: Isobel Bruce

Industrial Projects

London Based to £11,000
Several new projects have been awarded to one of the most advanced systems houses in the UK. In the technically challenging and difficult area of Industrial Control and Automation.

The company is able to offer positions as Project Leader, Team Leader and analyst. Programmer levels to high-calibre technicians and designers. Those who can offer expertise in multi-processor system architecture and/or advanced real-time programming methods will be ideal. The division itself has in-house access to a number of systems which include hardware such as INTEL 8086, ZILGO 80, MICRONOVA VAX11/780 and NOVA 3's. Candidates should have had experience in the relevant application areas, although good technical experience alone may well be of interest.

Contact: Margaret Stevens

Senior Analyst/Programmers

E.C.1 To £10,000 Package
Our client requires high calibre professionals to work on a variety of real-time projects using mini computers, as well as become involved with micro based packages and development.

A strong background in mini systems using a high level language is essential as is the ability to communicate with clients and technical staff at all levels. Some micro development experience is highly desirable.

This is a progressive forward looking software house offering excellent career prospects.

Contact: Brian Postles

Communications Technicians

South London c. £9,000

We are currently recruiting experienced communication staff for our client who has just upgraded from ICL 1900 series to a 2960, which will eventually be configured to run as a 3 m/b dual VME/B machine, encompassing a large communications network with associated equipment.

A minimum of 12 months experience is essential, covering areas of design and cataloguing, fault diagnosis and implementation of communications software with exposure to VME/B support work in fields other than communications. This is an excellent opportunity to gain experience within a substantial communications environment, utilising the latest technology.

Contact: Janet Chilvers

Analyst/Programmers

London EC2 up to £8,500
A very successful international organisation wishes to recruit several ANALYST/PROGRAMMERS to work in small teams to develop commercial on-line applications on an HP 3000.

Candidates should have three years programming experience together with some involvement in the design of systems. A background of minicomputers is obviously desirable but not mandatory as training will be given where appropriate. Interesting and friendly environment.

Contact: Jim Baker

Programmer/Analyst

City £7,500

Our client, a medium sized insurance organisation, are in the process of installing their own mini computer, and need an experienced person to play a major role in the development of systems. Initially working very closely with the software house who are supplying the turnkey system, also liaising with the bureau which the company is currently using.

A minimum of two years COBOL, preferably from a small machine environment, some programme design experience is essential.

The appointee will have every opportunity to develop within the company plus all benefits associated with a financial organisation.

Contact: Janet Chilvers

COBOL Programmer

Bristol c. £7,500

Our client, a leading international computer services organisation, wishes to appoint a Programmer in one of their product support groups. Applicants should have at least two years in commercial applications using COBOL (and possibly APL) on IBM 370's or ICL machines. Ability to deal with clients and solve user problems is essential.

GERMANY

to DM 65,000 p.a.

We are an established systems house specialising in the real time application of mini computers to process control, communications and terminal based systems. Our German operation has built up an excellent reputation for high quality work which has led to an increasing demand for its services.

As such, we can offer excellent career prospects for software specialists to join our permanent staff. The work is varied and demanding and is mainly on a project basis where we take complete system responsibility.

The computers we are working on include DEC Honeywell Ferranti Data General TI AEG Siemens Motorola Intel

Among the many benefits you will have working for an English company in Germany are:

- Profit sharing
- Travel allowance or company car
- Attractive holiday arrangements
- Free language tuition
- Removal and settling in allowance

You will also enjoy a choice of good living accommodation with minimal commuting, and the advantage of excellent connections to the rest of Europe for travel and recreation purposes.

Additionally, we have vacancies in our London and Manchester offices.

For further information, please contact: Knut Jørgensen, DAI Limited, 24 Warwick Street, London, W1R 5RB. Tel: 01-734 5486

THE SALES BIT

Persuasion is always better than force

ARE you sitting comfortably? Then I'll begin.

One day the North Wind and the Sun were arguing about which was the stronger. They were unable to agree and decided to devise a means whereby their argument could be settled.

Down in the world below, a man was walking along with a sack held firmly over his shoulders to keep out the cold of a less than tolerable day. The North Wind decided that here was a perfect vehicle for proving his superiority. He therefore stated that he could remove the sack from the man's back more quickly and effectively than the Sun.

The man was shocked by the sudden arrival of a fierce and bitter wind that almost blew him to the ground, but he quickly adjusted to the unexpected assault, grasped the sack tightly, braced himself firmly and walked determinedly into the unwelcome blast. The harder the wind blew, the tighter he held the sack. The fiercer the assault, the more determined he became. Eventually the North Wind realised he was making no progress, at all, and agreed to let the Sun have a go.

The man was as surprised by the sudden change in the weather as he had been by the arrival of the wind. The sky began to clear, the temperature rose, and very soon the man began to ease his grip on the sack and soon felt so warm and relaxed that he took off the sack, lay down under a tree and went to sleep.

I am sure this Aesop fable has appeared somewhere in the childhood of most readers, but its point would be just as relevant if it were to appear in the middle of a training course for salesmen or managers.

Whether the situation is a difficult negotiation, the admonishment of a delinquent salesman, the settlement of a dispute, or a person-to-person disagreement, one can always rely on aggressive tactics to

strengthen the resolve of the protagonist and oblige him to take the opposite route to that being thrust upon him.

As a matter of principle, most people will give less under duress than they will in circumstances of consideration and friendly persuasion.

One of the greatest apparent justifications for the aggressive/autocratic stance is the belief that right is on one's side. It seldom is, in the absolute sense, and the very existence of a dispute is usually a function of one's opponent having an equally strong faith in his own case.

It's amazing how many people put on blinkers in order to handle a difficult negotiation and find it impossible to view the situation from the other's standpoint. This is as applicable to man-management as it is to selling.

Certainly one uses the term "sales aggression", but this should be a "bridled" force closely related to enthusiasm which embraces the whole gamut of selling activity rather than person-to-person communications which typically thrive on resolve, tempered with consideration and sensitivity.

Back to Aesop: The moral is not simply a matter of force versus persuasion; it is also about identifying what people are seeking, what they need, what they want, what will make them happy — not inflicting upon them what one wishes them to have.

The man in the story wanted to be warm, not cold, and no manner of argument about the warmth of a post-douche glow was going to persuade him otherwise.

TRADER

Trader welcomes comments on his column and is happy to consider readers' problems in marketing and selling.

CALLS FOR PAPERS

Comnet 81 in Budapest

PAPERS are invited by October 1 for Comnet 81, a conference that will look at computer networks from the user's point of view. It is to be held next May in Budapest, Hungary. Sponsored by the International Federation for Information Processing and UNESCO, the conference aims to identify the problems associated with using computers remotely, and to suggest solutions.

Contributions are invited on topics including network performance, data crossing national boundaries, new services such as electronic mail and videotext, network operators' experience, and the needs of bodies such as the International Standards Organisation and the Conference of European Post and Telegraph Administrations.

Comnet 81 is a sequel to a similar event in Budapest in 1977. Members of the programme committee include Dr Ronald Davies of the National Physical Laboratory, Louis Pouzin of the Institut de Recherche en Informatique et d'Automatique, and Dr Fritz

Telecoms software

PAPERS are invited for the Fourth International Conference on Software Engineering for Telecommunications Switching Systems to be held at Warwick University in July next year. Synopses should be sent to the organisers, the Institution of Electrical Engineers, Salvay Place, London, WC2 by September 8.

Recruitment LOGISTIX In Informatics

PL-1 Applications Programmers
Belgium: Salary £20K

A European Systems and Software Supplier with a Regional Headquarters in Brussels is seeking several PL-1 Applications Programmers for six months to one year contracts. All candidates must have PL-1 programming experience amounting to 2 years' or more in a Database (IMS) and Teleprocessing (CICS) environment. Applications experience should have included stock control and recording, sales budgeting, forecasting and analysis, work in progress and materials control. Although not essential, it is preferable to offer some French language ability for social as well as work purposes. Initial interviews will be held in our offices after which successful candidates will spend one day with the client.

Ref: L/30/A

Real-Time Applications

Greater Manchester: Salary to £10K + Benefits

A well established Systems House specialising in the supply of Industrial Process Control Systems requires Real Time Programmers for its Manchester office. Applicants with at least two years' real-time programming and systems experience will be considered for these demanding career positions. You will be offered the opportunity of involvement in all stages of software and systems design and implementation. Fluency in either Assembly or BASIC is essential. Preference will be given to those who have worked with a manufacturer or systems supplier. Familiarity with the systems supplied by Companies such as Foxboro, Kent or Ferranti is a further advantage. There are ample opportunities for both national and international travel.

Ref: L/30/B

SNA & Telecommunications

Paris: Salary to £16K

A well-known European Systems Supplier and Consultancy has vacancies at its Paris headquarters for Systems Programmers, Software Development Specialists and Project Leaders. Suitable applicants should offer specialist expertise in the area of Data Communications, Message Switching (with particular reference to SNA techniques) and Mini/Micro Software Development. Candidates with a good command of the French language will be particularly welcome to apply.

Ref: L/30/C

Software Trainers

Heathrow & Berks: Salary to £10K

A leading manufacturer of mini-computers for both scientific and technical applications seeks several Software Trainers for its U.K. Regional Headquarters. Work content will include the staff training of both existing and prospective customers in general D.P. techniques and the individual requirements and capabilities of the Company's Software, Education currently in the form of product demonstrations, seminars, workshops and of course, inevitable "on the job" learning. The development of software courses in areas not so far covered by the Company will form an essential part of the position. The Company has a stated preference for candidates who can combine previous FORTRAN and/or Assembly programming in a practical environment with past or current experience as a Software Lecturer or Trainer in an academic or manufacturing environment.

Ref: L/30/D

IBM Systems Engineers

Germany and Switzerland: Salary £22K

We can offer outstanding permanent career positions for Senior Systems Engineers and Project Managers in Rheinland, Bavaria and Switzerland. Technical and personal requirements are high. You must demonstrate continuous experience in the implementation and/or support of Data Base and Teleprocessing systems in a large or multi-user IBM Amdahl on-line site. It is a pre-requisite to offer "hands-on" software experience with IMS DB/DC, CICS/VS, MVS or with the D.B. or T.P. Software of independent suppliers. The Company offers higher than average salaries (in line with Continental standards) plus a range of extensive and worthwhile benefits. Interviews can be arranged to meet individual requirements.

Ref: L/30/E

Software Support-Graphics

Home Counties: To £8K + Car

One of the market leaders in the manufacture and sale of graphics terminals and instrumentation devices has a requirement for Analyst/Programmer. Successful applicants will be involved in pre-sales support, the installation, software package and training of customer personnel. Candidates should offer at least 2 years' experience with IMS DB/DC, CICS/VS, MVS or with the D.B. or T.P. Software of independent suppliers. The Company offers higher than average salaries (in line with Continental standards) plus a range of extensive and worthwhile benefits. Interviews can be arranged to meet individual requirements.

Ref: L/30/F

Software Consultants

London: Salary to £13K

Our clients, a leading international Project Management and Systems House, based in Central London, has an urgent requirement for project team specialists. Successful applicants will probably be graduates with a minimum of two years' programming experience on any commercial machine which is capable of both high level and low-level languages will be a distinct advantage. This is an exceptional opportunity for candidates who prefer to work with customers in developing their systems and solving related business problems. If you have designed at least one complete on-line system or have had project management responsibility then you will be considered for a more senior position.
